### Science and Engineering Practices

**Asking Questions and Defining Problems**
- Asking questions and defining problems in grades 3–5 builds on K–2 experiences and progresses to specifying qualitative relationships.
  - Ask questions that can be investigated based on patterns such as cause and effect relationships. (3-PS2-3)
  - Define a simple problem that can be solved through the development of a new or improved object or tool. (3-PS2-4)

**Planning and Carrying Out Investigations**
- Planning and carrying out investigations to answer questions or test solutions to problems in 3–5 builds on K–2 experiences and progresses to include investigations that control variables and provide evidence to support explanations or design solutions.
  - Plan and conduct an investigation collaboratively to produce data to serve as the basis for evidence, using fair tests in which variables are controlled and the number of trials considered. (3-PS2-1)
  - Make observations and/or measurements to produce data to serve as the basis for evidence for an explanation of a phenomenon or test a design solution. (3-PS2-2)

**Connections to Nature of Science**
- Science findings are based on recognizing patterns. (3-PS2-2)

**Scientific Investigations Use a Variety of Methods**
- Science investigations use a variety of methods, tools, and techniques. (3-PS2-1)

### Disciplinary Core Ideas

**PS2.A: Forces and Motion**
- Each force acts on one particular object and has both strength and a direction. An object at rest typically has multiple forces acting on it, but they add to give zero net force on the object. Forces that do not sum to zero can cause changes in the object’s speed or direction of motion. (Boundary: Qualitative and conceptual, but not quantitative addition of forces are used at this level.) (3-PS2-1)
- The patterns of an object’s motion in various situations can be observed and measured; when that past motion exhibits a regular pattern, future motion can be predicted from it. (Boundary: Technical terms, such as magnitude, velocity, momentum, and vector quantity, are not introduced at this level, but the concept that some quantities need both size and direction to be described is developed.) (3-PS2-2)

**PS2.B: Types of Interactions**
- Objects in contact exert forces on each other. (3-PS2-1)
- Electric and magnetic forces between a pair of objects do not require that the objects be in contact. The sizes of the forces in each situation depend on the properties of the objects and their distances apart and, for forces between two magnets, on their orientation relative to each other. (3-PS2-3, 3-PS2-4)

### Crosscutting Concepts

#### Patterns
- Patterns of change can be used to make predictions. (3-PS2-2)

#### Cause and Effect
- Cause and effect relationships are routinely identified. (3-PS2-1)
- Cause and effect relationships are routinely identified, tested, and used to explain change. (3-PS2-3)

#### Connections to Engineering, Technology, and Applications of Science

- Scientific discoveries about the natural world can often lead to new and improved technologies, which are developed through the engineering design process. (3-PS2-4)

---

**Articulation of DCIs across grade-levels:**

- **3.PS2.A:** (3-PS2-1), (3-PS2-2)
- **3.PS2.B:** (3-PS2-1), (3-PS2-2), (3-PS2-3), (3-PS2-4), (3-PS2-5)
- **3.PS2.C:** (3-PS2-1), (3-PS2-2), (3-PS2-3), (3-PS2-4)
- **3.ESS1.A:** (3-PS2-1), (3-PS2-2)
- **3.ESS1.B:** (3-PS2-1), (3-PS2-2)
- **3.ESS2.A:** (3-PS2-1), (3-PS2-2)
- **3.ESS2.B:** (3-PS2-1), (3-PS2-2)
- **3.ESS2.C:** (3-PS2-1), (3-PS2-2)

**New York State Next Generation Learning Standards Connections:**

**ELA/Literacy –**

- **3.R1:** Develop and answer questions to locate relevant and specific details in a text to support an answer or inference. (3-PS2-1, 3-PS2-3)
- **3.R3:** In informational texts, describe the relationship among a series of events, ideas, concepts, or steps in a text, using language that pertains to time, sequence, and cause/effect. (3-PS2-3)
- **3.R8:** Explain how claims in a text are supported by relevant reasons and evidence. (3-PS2-1, 3-PS2-2)
- **3.W6:** Conduct research to answer questions, including self-generated questions, and to build knowledge. (3-PS2-1, 3-PS2-2)
- **3.W7:** Recall relevant information from qualitative experiences or gather information from multiple sources; take brief notes on sources and sort evidence into provided categories. (3-PS2-1, 3-PS2-2)
- **3.SL3:** Ask and answer questions in order to evaluate a speaker’s point of view, offering appropriate elaboration and detail. (3-PS2-3)

**Mathematics –**

- **MP.2:** Reason abstractly and quantitatively. (3-PS2-1)
- **MP.5:** Use appropriate tools strategically. (3-PS2-1)
- **NY-3.MD.2:** Measure and estimate liquid volumes and masses of objects using grams (g), kilograms (kg), and liters (l). Add, subtract, multiply, or divide to solve one-step word problems involving masses or volumes that are given in the same units. (3-PS2-1)

*Connection boxes updated as of September 2018*
New York State P-12 Science Learning Standards

3. Interdependent Relationships in Ecosystems

Students who demonstrate understanding can:

3-LS2.1. Construct an argument that animals form groups that help members survive. [Clarification Statement: Examples of groups could include a herd of cattle, a swarm of bees, a flock of geese, a pod of whales, etc.]

3-LS4.1. Analyze and interpret data from fossils to provide evidence of the organisms and the environments in which they lived long ago. [Clarification Statement: Examples of data could include type, size, and distributions of fossil organisms. Examples of fossils and environments could include marine fossils found on dry land, tropical plant fossils found in Arctic areas, and fossils of extinct organisms.] [Assessment Boundary: Assessment does not include identification of specific fossils or present plants and animals. Assessment is limited to major fossil types and relative ages.]

3-LS4.3. Construct an argument with evidence that in a particular habitat some organisms can survive well, some survive less well, and some cannot survive at all. [Clarification Statement: Examples of evidence could include needs and characteristics of the organisms and habitats involved. The organisms and their habitat make up a system in which the parts depend on each other.]

3-LS4.4. Make a claim about the merit of a solution to a problem caused when the environment changes and the types of plants and animals that live there may change.* [Clarification Statement: Examples of environmental changes could include both natural and human-influenced changes in land characteristics, water distribution, temperature, food, and other organisms.] [Assessment Boundary: Assessment is limited to a single environmental change. Assessment does not include the greenhouse effect or climate change.]

The performance expectations above were developed using the following elements from the NRC document, A Framework for K-12 Science Education: Practices, Cross-Cutting Concepts, and Core Ideas:

Science and Engineering Practices

Analyzing and Interpreting Data
Analyzing data in 3–5 builds on K–2 experiences and progresses to introducing quantitative approaches to collecting data and conducting multiple trials of qualitative observations. When possible and feasible, digital tools should be used.

- Analyze and interpret data to make sense of phenomena using logical reasoning.
- Construct an argument with evidence about the natural and designed worlds.

Engaging in Argument from Evidence
Engaging in argument from evidence in 3–5 builds on K–2 experiences and progresses to critiquing the scientific explanations or solutions proposed by peers by citing relevant evidence about the natural and designed worlds.

- Construct an argument with evidence, data, and/or a model. (3-LS2-1)
- Construct an argument with evidence. (3-LS4-3)
- Make a claim about the merit of a solution to a problem by citing relevant evidence about how it meets the criteria and constraints of the problem. (3-LS4-4)

Disciplinary Core Ideas

LS2.C: Ecosystem Dynamics, Functioning, and Resilience
- When the environment changes in ways that affect a place's physical characteristics, temperature, or availability of resources, some organisms survive and reproduce, others move to new locations, yet others move into the transformed environment, and some die. (secondary to 3-LS4-4)

LS2.D: Social Interactions and Group Behavior
- (NYSED) Being part of a group helps some animals obtain food, defend themselves, and survive. Groups may serve different functions and vary dramatically in size. (Note: Moved from K–2) (3-LS2-1)

LS4.A: Evidence of Common Ancestry and Diversity
- Some kinds of plants and animals that once lived on Earth are no longer found anywhere. (Note: Moved from K–2) (3-LS4-1)
- Fossils provide evidence about the types of organisms that lived long ago and also about the nature of their environments. (3-LS4-1)

LS4.C: Adaptation
- For any particular environment, some kinds of organisms survive well, some survive less well, and some cannot survive at all. (3-LS4-3)

LS4.D: Biodiversity and Humans
- Populations live in a variety of habitats, and change in those habitats affects the organisms living there. (3-LS4-4)

Crosscutting Concepts

Cause and Effect
- Cause and effect relationships are routinely identified and used to explain change. (3-LS2-1),(3-LS3-4)
- Scale, Proportion, and Quantity
  - Observable phenomena exist from very short to very long time periods. (3-LS4-1)
- Systems and System Models
  - A system can be described in terms of its components and their interactions. (3-LS4-4)

Connections to Engineering, Technology, and Applications of Science

Interdependence of Science, Engineering, and Technology
- Knowledge of relevant scientific concepts and research findings is important in engineering. (3-LS4-4)

Connections to Nature of Science

Scientific Knowledge Assumes an Order and Consistency in Natural Systems
- Science assumes consistent patterns in natural systems. (3-LS4-1)

Connections to other DCIs in third grade: 3.ESS2.B (3-LS1-3); 3.ESS3.B (3-LS4-4)

Articulation of DCIs across grade levels: K.ESS2.A (3-LS1-3); 3-LS4-4); K.ESS3.A (3-LS1-3); 3-LS4-4); 1.LS1.B (3-LS2-1); 2.LS2.A (3-LS4-3); 3-LS4-4); 3.W1 (3-LS4-4); 3.ESS3.B (3-LS4-4); 3-LS4-4); MS.LS2.A (3-LS2-1); 3-LS4-4); MS.LS2.C (3-LS2-1); 3-LS4-4); MS.LS2.B (3-LS4-4); MS.LS4.A (3-LS4-4); MS.LS4.A (3-LS4-4)

New York State Next Generation Learning Standards Connections:

ELA/Literacy-

3R1. Develop and answer questions to locate relevant and specific details in a text to support an answer or inference. (3-LS2-1),(3-LS4-1),(3-LS4-3),(3-LS4-4)

3R2. Determine a theme or central idea and explain how it is supported by key details; summarize portions of a text. (3-LS4-1),(3-LS4-3),(3-LS4-4)

3R3. In informational texts, describe the relationship among a series of events, ideas, concepts, or steps in a text, using language that pertains to time, sequence, and cause/effect. (3-LS2-1),(3-LS4-1),(3-LS4-3),(3-LS4-4)

3W1. Write an argument to support claim(s), using clear reasons and relevant evidence. (3-LS2-1),(3-LS4-1),(3-LS4-3),(3-LS4-4)

3W7. Recall relevant information from experiences or gather information from multiple sources; take brief notes on sources and sort evidence into provided categories. (3-LS4-1)

3SL4. Report on a topic or text, tell a story, or recount an experience with appropriate facts and relevant, descriptive details, speaking clearly at an understandable pace. (3-LS4-3),(3-LS4-4)

Mathematics-

MP.2. Reason abstractly and quantitatively. (3-LS1-3),(3-LS4-3),(3-LS4-4)

MP.4. Model with mathematics. (3-LS2-1),(3-LS4-3),(3-LS4-4)

MP.5. Use appropriate tools strategically. (3-LS4-1)

NY-3.NBT.1. Number and Operations in Base Ten (3-LS2-1)

NY-3.MD.4. Draw a scaled picture graph and a scaled bar graph to represent a data set with several categories. Solve one- and two-step “how many more” and “how many less” problems using information presented in scaled bar graphs. (3-LS4-3)

NY-3.MD.4. Generate measurement data by measuring lengths using rulers marked with halves and fourths of an inch. Show the data by making a line plot, where the horizontal scale is marked off in appropriate units—whole numbers, halves, or quarters. (3-LS4-1)

*Connection boxes updated as of September 2018

*The performance expectations marked with an asterisk integrate traditional science content with engineering through a Practice or Disciplinary Core Idea. The text in the “Disciplinary Core Ideas” section is reproduced verbatim from A Framework for K-12 Science Education: Practices, Cross-Cutting Concepts, and Core Ideas unless it is preceded by (NYSED).
### 3. Inheritance and Variation of Traits: Life Cycles and Traits

**Students who demonstrate understanding can:**

| 3-LS1. | Develop models to describe that organisms have unique and diverse life cycles but all have in common birth, growth, reproduction, and death. | [Clarification Statement: Changes organisms go through during their life form a pattern.] |
| 3-LS3. | Analyze and interpret data to provide evidence that plants and animals have traits inherited from parents and that variation of these traits exists in a group of similar organisms. | [Clarification Statement: Patterns are the similarities and differences in traits shared between offspring and their parents, or among siblings. Emphasis is on organisms other than humans.] |
| 3-LS2. | Use evidence to support the explanation that traits can be influenced by the environment. | [Clarification Statement: Examples of the environment affecting a trait could include normally tall plants grown with insufficient water are stunted; and, a pet dog that is given too much food and little exercise may become overweight.] |
| 3-LS4. | Use evidence to construct an explanation for how the variations in characteristics among individuals of the same species may provide advantages in surviving, finding mates, and reproducing. | [Clarification Statement: Examples of cause and effect relationships could include plants that have larger thorns than other plants may be less likely to be eaten by predators; and, animals that have better camouflage coloration than other animals may be more likely to survive and therefore more likely to produce offspring.] |

### Science and Engineering Practices

**Developing and Using Models**

- Modeling in 3–5 builds on K–2 experiences and progresses to building and revising simple models and using models to represent events and design solutions.
  - Develop models to describe phenomena. (3-LS1-1)

**Analyzing and Interpreting Data**

- Analyzing data in 3–5 builds on K–2 experiences and progresses to introducing quantitative approaches to collecting data and conducting multiple trials of qualitative observations. When possible and feasible, digital tools should be used.
  - Analyze and interpret data to make sense of phenomena using logical reasoning. (3-LS3-1)

**Constructing Explanations and Designing Solutions**

- Constructing explanations and designing solutions in 3–5 builds on K–2 experiences and progresses to the use of evidence in constructing explanations that specify variables that describe and predict phenomena and in designing multiple solutions to design problems.
  - Use evidence (e.g., observations, patterns) to support an explanation. (3-LS3-2)
  - Use evidence (e.g., observations, patterns) to construct an explanation. (3-LS4-2)

### Disciplinary Core Ideas

| LS1.B: Growth and Development of Organisms | • Reproduction is essential to the continued existence of every kind of organism. Plants and animals have unique and diverse life cycles. (3-LS1-1) |
| LS3.A: Inheritance of Traits | • Other characteristics result from individuals’ interactions with the environment, which can range from diet to learning. (3-LS2-1) |
| LS3.B: Variation of Traits | • The environment also affects the traits that an organism develops. (3-LS2-2) |
| LS4.B: Natural Selection | • Sometimes the differences in characteristics between individuals of the same species provide advantages in surviving, finding mates, and reproducing. (3-LS4-2) |

### Crosscutting Concepts

**Patterns**

- • Similarities and differences in patterns can be used to sort and classify natural phenomena. (3-LS3-1)
- • Patterns of change can be used to make predictions. (3-LS1-1)

**Cause and Effect**

- • Cause and effect relationships are routinely identified and used to explain change. (3-LS3-2), (3-LS4-2)
New York State P-12 Science Learning Standards

3. Weather and Climate

Students who demonstrate understanding can:

3-ESS2-1. Represent data in tables and graphical displays to describe typical weather conditions expected during a particular season. [Clarification Statement: Examples of data could include average temperature, precipitation, and wind direction.] [Assessment Boundary: Assessment of graphical displays is limited to pictographs and bar graphs. Assessment does not include climate change.]

3-ESS2-2. Obtain and combine information to describe climates in different regions of the world. [Clarification Statement: Emphasis should be on various climates in different regions rather than on localized weather conditions.]

3-ESS3-1. Make a claim about the merit of a design solution that reduces the impacts of a weather-related hazard.* [Clarification Statement: Examples of design solutions to weather-related hazards could include barriers to prevent flooding, wind resistant roofs, and lightning rods.]

3-ESS3-2. Plan and conduct an investigation to determine the connections between weather and water processes in Earth systems. [Clarification Statement: Emphasis should be on the processes that connect the water cycle and weather patterns.]

---

Science and Engineering Practices

Planning and Carrying Out Investigations
Planning and carrying out investigations to answer questions or test solutions to problems in 3–5 builds on K–2 experiences and progresses to include investigations that control variables and provide evidence to support explanations or design solutions.

- Plan and conduct an investigation collaboratively to produce data to serve as the basis for evidence, using fair tests in which variables are controlled and the number of trials considered. (3-ESS2-3)
- Make observations and/or measurements to produce data to serve as the basis for evidence for an explanation of a phenomenon or test a design solution. (3-ESS2-3)

Analyzing and Interpreting Data
Analyzing data in 3–5 builds on K–2 experiences and progresses to introducing quantitative approaches to collecting data and conducting multiple trials of qualitative observations. When possible and feasible, digital tools should be used.

- Represent data in tables and various graphical displays (bar graphs and pictographs) to reveal patterns that indicate relationships. (3-ESS2-1)

Engaging in Argument from Evidence
Engaging in argument from evidence in 3–5 builds on K–2 experiences and progresses to critiquing the scientific explanations or solutions proposed by peers by citing relevant evidence about the natural and designed world(s).

- Make a claim about the merit of a solution to a problem by citing relevant evidence about how it meets the criteria and constraints of the problem. (3-ESS3-1)

Obtaining, Evaluating, and Communicating Information
Obtaining, evaluating, and communicating information in 3–5 builds on K–2 experiences and progresses to evaluating the merit and accuracy of ideas and methods.

- Obtain and combine information from books and other reliable media to explain phenomena. (3-ESS2-2)

Disciplinary Core Ideas

3-ESS2.D: Weather and Climate

- Scientists record patterns of the weather across different times and areas so that they can make predictions about what kind of weather might happen next. (3-ESS2-1)
- Climate describes a range of an area's typical weather conditions and the extent to which those conditions vary over years. (3-ESS2-2)
- (NYSED) Earth's processes continuously cycle water, contributing to weather and climate. (3-ESS2-3)

3-ESS3.B: Natural Hazards

- A variety of natural hazards result from natural processes. Humans cannot eliminate natural hazards but can take steps to reduce their impacts. (3-ESS3-1) (Note: This Disciplinary Core Idea is also addressed by 4-ESS3-2)

---

Crosscutting Concepts

Patterns

- Patterns of change can be used to make predictions. (3-ESS2-1), (3-ESS2-2)

Cause and Effect

- Cause and effect relationships are routinely identified, tested, and used to explain change. (3-ESS3-1), (3-ESS3-2)

Connections to Engineering, Technology, and Applications of Science

Influence of Engineering, Technology, and Science on Society and the Natural World

- (NYSED) Engineers improve existing technologies or develop new ones to increase their benefits (e.g., improved Doppler radar), decrease known risks (e.g., severe weather alerts), and meet societal demands (e.g., cell phone applications). (3-ESS3-1)

Connections to Nature of Science

Science is a Human Endeavor

- Science affects everyday life. (3-ESS3-1)

4. Energy

**Science and Engineering Practices**
- Asking Questions and Defining Problems
  - Asking questions and defining problems in grades 3–5 builds on grades K–2 experiences and progresses to specifying qualitative relationships.
  - Ask questions that can be investigated and predict reasonable outcomes based on patterns such as cause and effect relationships. (4-PS3-3)
  - Planning and Carrying Out Investigations
    - Planning and carrying out investigations to answer questions or test solutions to problems in 3–5 builds on K–2 experiences and progresses to include investigations that control variables and provide evidence to support explanations or design solutions.
  - Make observations to produce data to serve as the basis for evidence for an explanation of a phenomenon or test a design solution. (4-PS3-2)
- Constructing Explanations and Designing Solutions
  - Constructing explanations and designing solutions in 3–5 builds on K–2 experiences and progresses to the use of evidence in constructing explanations that specify variables that describe and predict phenomena and in designing multiple solutions to solve problems. (4-PS3-4)
- Obtaining, Evaluating, and Communicating Information
  - Obtaining, evaluating, and communicating information in 3–5 builds on K–2 experiences and progresses to evaluate the merit and accuracy of ideas and methods.

**Disciplinary Core Ideas**
- PS3.A: Definitions of Energy
  - (NYSED) A given object possesses more energy of motion when it is moving faster. (4-PS3-1)
  - (NYSED) Energy can be transferred by moving objects or by sound, light, heat, or electric currents. (4-PS3-2), (4-PS3-3)
- PS3.B: Conservation of Energy and Energy Transfer
  - Conservation of Energy and Energy Transfer
  - Energy is present whenever there are moving objects, sound, light, or other sources of stored energy. Energy can be transferred from one object to another, thereby changing their motion. In such collisions, some energy is typically also transferred to the surrounding air; as a result, the air gets heated and sound is produced. (4-PS3-2), (4-PS3-3)
  - (NYSED) Energy can also be transferred by electric currents, which can then be used locally to produce motion, sound, heat, or light. The currents may have been produced to begin with by transforming the energy of motion into electrical energy. (4-PS3-2), (4-PS3-4)
- PS3.C: Relationship Between Energy and Forces
  - When objects collide, the contact forces transfer energy so as to change the objects’ motions. (4-PS3-3)
  - PS3.D: Energy in Chemical Processes and Everyday Life
    - The expression “produce energy” typically refers to the conversion of stored energy into a desired form for practical use. (4-PS3-4)
- ESS3.A: Natural Resources
  - Energy and fuels that humans use are derived from natural sources, and the environment in multiple ways. Some resources are renewable over time, and others are not. (4-ESS3-1)
- ETS1.A: Defining Engineering Problems
  - Possible solutions to a problem are limited by available materials and resources, and additional constraints. The success of a designed solution is determined by considering the desired features of a solution (criteria). Different proposals for solutions can be compared on the basis of how well each one meets the specified criteria for success or how well each takes the constraints into account. (secondary to 4-PS3-4)

**Crosscutting Concepts**
- Cause and Effect
  - Cause and effect relationships are routinely identified and used to explain change. (4-ESS3-1)
- Energy and Matter
  - Energy can be transferred in various ways and between objects. (4-PS3-2), (4-PS3-4)
  - (NYSED) Energy can be transferred by musical circuits that convert electrical energy into energy of motion of a vehicle, light, or sound; batteries that convert chemical energy to electrical energy, and, a passive solar heater that converts light into heat. Examples of constraints could include the materials, cost, or time to design the device. (4-ESS3-1)
  - Devices should be limited to those that convert motion energy to electric energy or use stored energy to cause motion or produce light or sound.

**Connections to Nature of Science**
- Science is a Human Endeavor
  - New York State Next Generation Learning Standards Connections: ELA/Literacy–
    - 4R1 Locate and refer to relevant details and evidence when explaining what a text says explicitly/implicitly and make logical inferences. (4-PS3-1)
    - 4R3 In informational texts, explain events, procedures, ideas, or concepts, including what happened and why, based on specific evidence from the text. (4-PS3-1)
    - 4W6 Conduct research to answer questions, including self-generated questions, and to build knowledge through investigating multiple aspects of a topic. (4-PS3-2), (4-PS3-3), (4-PS3-4), (4-ESS3-1)
    - 4W7 Recall relevant information from experiences or gather relevant information from multiple sources; take notes and categorize information, and provide a list of sources. (4-PS3-1), (4-PS3-2), (4-PS3-3), (4-PS3-4), (4-ESS3-1)
    - 4W8 Draw evidence from literary or informational texts to support analysis, reflection, and research. (4-PS3-1), (4-ESS3-1)
- Mathematics–
  - MP.2 Reason abstractly and quantitatively. (4-ESS3-1)
  - MP.4 Model with mathematics. (4-ESS3-1)

**NY-4.OA.1 Interpret a multiplication equation as a comparison. Represent verbal statements of multiplicative comparisons as multiplication equations. (4-ESS3-1)**

*The performance expectations marked with an asterisk integrate traditional science content with engineering through the Practice or Disciplinary Core Idea. The text in the “Disciplinary Core Ideas” section is reproduced verbatim from A Framework for K-12 Science Education: Practices, Cross-Cutting Concepts, and Core Ideas unless it is preceded by (NYSED).*
NY-4.OA.3 Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. (4-PS3-4)

*Connection boxes updated as of September 2018
New York State P-12 Science Learning Standards

4. Waves: Waves and Information

Students who demonstrate understanding can:

4-PS4-1. Develop a model of waves to describe patterns in terms of amplitude and wavelength and that waves can cause objects to move. [Clarification Statement: Examples of models could include diagrams, analogies, and physical models using wire to illustrate wavelength and amplitude of waves.] [Assessment Boundary: Assessment does not include interference effects, electromagnetic waves, nonperiodic waves, or quantitative models of amplitude and wavelength.]

4-PS4-3. Generate and compare multiple solutions that use patterns to transfer information.* [Clarification Statement: Examples of solutions could include drums sending coded information through sound waves, using a grid of 1's and 0's representing black and white to send information about a picture, and using Morse code to send text.]

The performance expectations above were developed using the following elements from the NRC document A Framework for K-12 Science Education: Practices, Cross-Cutting Concepts, and Core Ideas unless it is preceded by (NYSED).

</table>

**Connections to Nature of Science**

- Science findings are based on recognizing patterns. (4-PS4-1)

**Articulation of DCIs across grade levels:**

- **4-PS3.A** (4-PS4-1); **4-PS3.B** (4-PS4-1); **4-ETS1.A** (4-PS4-3)

**New York State Next Generation Learning Standards Connections:**

**ELA/Literacy:**

- **4.R1** Locate and refer to relevant details and evidence when explaining what a text says explicitly/implicitly and make logical inferences. (4-PS3-1)
- **4SL5** Include digital media and/or visual displays in presentations to emphasize central ideas or themes. (4-PS4-1)

**Mathematics:**

- **MP.4** Model with mathematics. (4-PS4-1)
- **NY-4.G.1** Draw points, lines, line segments, rays, angles (right, acute, obtuse), and perpendicular and parallel lines. Identify these in two-dimensional figures. (4-PS4-1)

- Connection boxes updated as of September 2018

*The performance expectations marked with an asterisk integrate traditional science content with engineering through a Practice or Disciplinary Core Idea. The text in the “Disciplinary Core Ideas” section is reproduced verbatim from A Framework for K-12 Science Education: Practices, Cross-Cutting Concepts, and Core Ideas unless it is preceded by (NYSED).
### 4. Structure, Function, and Information Processing

Students who demonstrate understanding can:

- **4-PS4-2.** Develop a model to describe that light reflecting from objects and entering the eye allows objects to be seen. [Assessment Boundary: Assessment does not include knowledge of specific colors reflected and seen, the cellular mechanisms of vision, or how the retina works.]

- **4-LS1-1.** Construct an argument that plants and animals have internal and external structures that function to support survival, growth, behavior, and reproduction. [Clarification Statement: Examples of structures could include thorns, stems, roots, colored petals, heart, stomach, lung, brain, and skin.] [Assessment Boundary: Assessment is limited to macroscopic structures within plant and animal systems.]

- **4-LS1-2.** Use a model to describe that animals receive different types of information through their senses, process the information in their brain, and respond to the information in different ways. [Clarification Statement: Emphasis is on systems of information transfer.] [Assessment Boundary: Assessment does not include the mechanisms by which the brain stores and recalls information or the mechanisms of how sensory receptors function.]

The performance expectations above were developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

**Science and Engineering Practices**

**Developing and Using Models**
- Modeling in 3–5 builds on K–2 experiences and progresses to building and revising simple models and using models to represent events and design solutions.
- Develop a model to describe phenomena. (4-PS4-2)
- Use a model to test interactions concerning the functioning of a natural system. (4-LS1-2)

**Engaging in Argument from Evidence**
- Engaging in argument from evidence in 3–5 builds on K–2 experiences and progresses to critiquing the scientific explanations or solutions proposed by peers by citing relevant evidence about the natural and designed world(s).
- Construct an argument with evidence, data, and/or a model. (4-LS1-1)

**Disciplinary Core Ideas**

- **4-PS4.B: Electromagnetic Radiation**
  - An object can be seen when light reflected from its surface enters the eyes. (4-PS4-2)

- **4-LS1.A: Structure and Function**
  - Plants and animals have both internal and external structures that serve various functions in growth, survival, behavior, and reproduction. (4-LS1-1)

- **4-LS1.D: Information Processing**
  - Different sense receptors are specialized for particular kinds of information, which may be then processed by the animal’s brain. Animals are able to use their perceptions and memories to guide their actions. (4-LS1-2)

**Crosscutting Concepts**

- **Cause and Effect**
  - Cause and effect relationships are routinely identified. (4-PS4-2)

- **Systems and System Models**
  - A system can be described in terms of its components and their interactions. (4-LS1-1), (LS1-2)

Connections to other DCIs in fourth grade: N/A

Articulation of DCIs across grade levels:
- **MS.LS1.D** (4-PS4-2), (4-LS1-2)

New York State Next Generation Learning Standards Connections:

**ELA/Literacy**
- **4W1** Write an argument to support claim(s), using clear reasons and relevant evidence. (4-LS1-1)
- **4SL5** Include digital media and/or visual displays in presentations to emphasize central ideas or themes. (4-PS4-2), (4-LS1-2)

**Mathematics**
- **MP.4** Model with mathematics. (4-PS4-2)
- **NY-4.G.1** Draw points, lines, line segments, rays, angles (right, acute, obtuse), and perpendicular and parallel lines. Identify these in two-dimensional figures. (4-LS1-1)
- **NY-4.G.3** Recognize a line of symmetry for a two-dimensional figure as a line across the figure such that the figure can be folded along the line into matching parts. Identify line- symmetric figures and draw lines of symmetry. (4-PS3-4)

*Connection boxes updated as of September 2018*
4-ESS1-1. Identify evidence from patterns in rock formations and fossils in rock layers to support an explanation for changes in a landscape over time. [Clarification Statement: Examples of evidence from patterns could include rock layers with marine shell fossils above rock layers with plant fossils and no shells, indicating a change from land to water over time; tilted rock layers indicate past crustal movement; glacial scratches on rock formations indicating glacier movement; and, a canyon with different rock layers in the walls and a river in the bottom, indicating that over time a river cut through the rock.] [Assessment Boundary: Assessment does not include specific knowledge of the mechanism of rock formation or memorization of specific rock formations and layers. Assessment is limited to relative time.]

4-ESS2-1. Make observations and/or measurements to provide evidence of the effects of weathering or the rate of erosion by water, ice, wind, or vegetation. [Clarification Statement: Examples of variables to test could include angle of slope in the downhill movement of water and/or loose Earth materials due to gravity, amount of vegetation, speed of wind, relative rate of deposition, cycles of freezing and thawing of water, cycles of heating and cooling, and volume of water flow.] [Assessment Boundary: Assessment is limited to a single form of weathering or erosion.]

4-ESS2-2. Analyze and interpret data from maps to describe patterns of Earth’s features. [Clarification Statement: Maps can include topographic maps of Earth’s land and ocean floor, as well as maps of the locations of mountains, continental boundaries, volcanoes, and earthquakes.]

4-ESS3-2. Generate and compare multiple solutions to reduce the impacts of natural Earth processes on humans.* [Clarification Statement: Examples of solutions could include designing an earthquake resistant building and improving monitoring of volcanic activity.]

---

**Science and Engineering Practices**

**Planning and Carrying Out Investigations** Planning and carrying out investigations to answer questions or test solutions to problems in 3-5 builds on K–2 experiences and progresses to the use of evidence in designing multiple solutions to design problems.

- Make observations and/or measurements to produce data to serve as the basis for evidence for an explanation of a phenomenon. (4-ESS2-1)

**Analyzing and Interpreting Data**

Analyzing data in 3-5 builds on K–2 experiences and progresses to introducing quantitative approaches to collecting data and conducting multiple trials of qualitative observations. When possible and feasible, digital tools should be used.

- Analyze and interpret data to make sense of phenomena using logical reasoning. (4-ESS2-2)

**Constructing Explanations and Designing Solutions**

Constructing explanations and designing solutions in 3–5 builds on K–2 experiences and progresses to the use of evidence in constructing explanations that specify variables that describe and predict phenomena and in designing multiple solutions to design problems.

- Identify the evidence that supports particular points in an explanation. (4-ESS1-1)

- Generate and compare multiple solutions to a problem based on how well they meet the criteria and constraints of the design solution. (4-ESS2-3)

---

**Disciplinary Core Ideas**

**ESS1: The History of Planet Earth**

- Local, regional, and global patterns of rock formations reveal changes over time due to Earth's forces, such as earthquakes. The presence and location of certain fossil types indicate the order in which rock layers were formed. (4-ESS1-1)

**ESS2: Earth Materials and Systems**

- Rainfall helps to shape the land and affects the types of living things found in a region. Water, ice, wind, living organisms, and gravity break rocks, soils, and sediments into smaller particles and move them around. (4-ESS2-1)

- The locations of mountain ranges, deep ocean trenches, ocean floor structures, earthquakes, and volcanoes occur in patterns. Many earthquakes and volcanoes occur in bands that are often along the boundaries between continents and oceans. Major mountain chains form inside continents or near their edges. Maps can help locate the different land and water features areas of Earth. (4-ESS2-2)

**ESS3: Biogeography**

- Living things affect the physical characteristics of their regions. (4-ESS3-1)

**ESS3: Natural Hazards**

- A variety of hazards result from natural processes (e.g., earthquakes, tsunamis, volcanic eruptions). Humans cannot eliminate the hazards but can take steps to reduce their impacts. (4-ESS3-2) (Note: This Disciplinary Core Idea also be found in 3.WC)

**ETS1: Designing Solutions to Engineering Problems**

- Testing a solution involves investigating how well it performs under a range of likely conditions. (secondary to 4-ESS2-2)

---

**CrossCutting Concepts**

**Patterns**

- Patterns can be used as evidence to support an explanation. (4-ESS1-1), (4-ESS2-2)

**Causes and Effect**

- Cause and effect relationships are routinely identified, tested, and used to explain change. (4-ESS1-1), (4-ESS3-2)

### Science and Engineering Practices

**Developing and Using Models**
Modeling in 3–5 builds on K–2 experiences and progresses to building and revising simple models and using models to represent events and design solutions.

- Develop a model to describe phenomena. (5-PS1-1)
- Planning and Carrying Out Investigations
Planning and carrying out investigations to answer questions or test solutions to problems in 3–5 builds on K–2 experiences and progresses to include investigations that control variables and provide evidence to support explanations or design solutions.

- Conduct an investigation collaboratively to produce data to serve as the basis for evidence for an explanation of a phenomenon. (5-PS1-4)
- Make observations and measurements to produce data to serve as the basis for evidence for an explanation of a phenomenon. (5-PS1-3)

**Using Mathematics and Computational Thinking**
Mathematical and computational thinking in 3–5 builds on K–2 experiences and progresses to extending quantitative measurements to a variety of physical properties and using computation and mathematics to analyze data and compare alternative design solutions.

- Measure and graph quantities such as weight to address scientific and engineering questions and problems. (5-PS1-2)

### Disciplinary Core Ideas

**PS1.A: Structure and Properties of Matter**
- Matter of any type can be subdivided into particles that are too small to see, but even then the matter still exists and can be detected by other means. A model showing that gases are made of matter particles that are too small to see and are moving freely around in space can explain many observations, including the inflation and shape of a balloon and the effects of air on larger particles or objects. (5-PS1-1)

**PS1.B: Chemical Reactions**
- When two or more different substances are mixed, a new substance with different properties may be formed. (5-PS1-4)
- No matter what reaction or change in properties occurs, the total weight of the substances does not change. (Boundary: Mass and weight are not distinguished at this grade level.) (5-PS1-2)

### Crosscutting Concepts

**Cause and Effect**
- Cause and effect relationships are routinely identified, tested, and used to explain change. (5-PS1-4)

**Scale, Proportion, and Quantity**
- Natural objects exist from the very small to the immensely large. (5-PS1-1)
- Standard units are used to measure and describe physical quantities such as weight, time, temperature, and volume. (5-PS1-2), (5-PS1-3)

### Connections to Nature of Science

**Scientific Knowledge Assumes an Order and Consistency in Natural Systems**
- Science assumes consistent patterns in natural systems. (5-PS1-2)

### Articulation of DCIs across grade-levels:
- 2.PS1.A (5-PS1-1), (5-PS1-2), (5-PS1-3), 2.PS1.B (5-PS1-2), (5-PS1-4), MS.PS1.A (5-PS1-1), (5-PS1-2), (5-PS1-3), (5-PS1-4);
- MS.PS1.B (5-PS1-2), (5-PS1-4)

**New York State Next Generation Learning Standards Connections:**
- **ELA/Literacy -**
  - SW6 Conduct research to answer questions, including self-generated questions, and to build knowledge through investigation of multiple aspects of a topic using multiple sources. (5-PS1-2), (5-PS1-3), (5-PS1-4)
  - SW7 Recall relevant information from experiences or gather relevant information from multiple sources; summarize or paraphrase; avoid plagiarism and provide a list of sources. (5-PS1-2), (5-PS1-3), (5-PS1-4)
  - SW5 Draw evidence from literary or informational texts to respond and support analysis, reflection, and research by applying the Grade 5 Reading Standards. (5-PS1-2), (5-PS1-3), (5-PS1-4)
  - **Mathematics -**
  - MP.2 Reason abstractly and quantitatively. (5-PS1-1), (5-PS1-2), (5-PS1-3)
  - MP.4 Model with mathematics. (5-PS1-1), (5-PS1-2), (5-PS1-3)
  - MP.5 Use appropriate tools strategically. (5-PS1-2), (5-PS1-3)
  - NY-5.NBT.1 Recognize that in a multi-digit number, a digit in one place represents 10 times as much as it represents in the place to its right and 1/10 of what it represents in the place to its left. (5-PS1-1)
  - NY-5.NF.7 Apply and extend previous understandings of division to divide unit fractions by whole numbers and whole numbers by unit fractions. (5-PS1-1)
  - NY-5.MD.1 Convert among different-sized standard measurement units within a given measurement system when the conversion factor is given. Use these conversions in solving multi-step, real-world problems. (5-PS1-2)
  - NY-5.MD.3 Recognize volume as an attribute of solid figures and understand concepts of volume measurement. (5-PS1-1)

*The performance expectations marked with an asterisk integrate traditional science content with engineering through a Practice or Disciplinary Core Idea. The text in the "Disciplinary Core Ideas" section is reproduced verbatim from A Framework for K-12 Science Education: Practices, Cross-Cutting Concepts, and Core Ideas unless it is preceded by (NYSED)*.

---

**Students who demonstrate understanding can:**

5-PS1-1. **Develop a model to describe that matter is made of particles too small to be seen.** [Clarification Statement: Examples of evidence supporting a model could include adding air to expand a basketball, compressing air in a syringe, dissolving sugar in water, and evaporating salt water.] [Assessment Boundary: Assessment does not include the atomic-scale mechanism of evaporation and condensation or defining the unseen particles.]

5-PS1-2. **Measure and graph quantities to provide evidence that regardless of the type of change that occurs when heating, cooling, or mixing substances the total amount of matter is conserved.** [Clarification Statement: Examples of reactions or changes could include phase changes, dissolving, and mixing that form new substances. Assume that reactions with any gas production are conducted in a closed system.] [Assessment Boundary: Assessment does not include distinguishing between mass and weight.]

5-PS1-3. **Make observations and measurements to identify materials based on their properties.** [Clarification Statement: Examples of materials could include baking soda and other powders, metals, minerals, and liquids. Examples of properties could include color, hardness, reflectivity, electrical conductivity, thermal conductivity, response to magnetic forces, and solubility; density is not intended as an identifiable property.] [Assessment Boundary: Assessment does not include density or distinguishing between mass and weight.]

5-PS1-4. **Conduct an investigation to determine whether the mixing of two or more substances results in new substances.** [Clarification Statement: Examples could include mixing baking soda and water compared to mixing baking soda and vinegar.]
### 5. Matter and Energy in Organisms and Ecosystems

**Science and Engineering Practices**

Developing and Using Models
Modeling in 3–5 builds on K–2 experiences and progresses to building and revising simple models and using models to represent events and design solutions.
- Use models to describe phenomena. (5-PS3-1)
- Develop a model to describe phenomena. (5-LS2-1)

Engaging in Argument from Evidence
Engaging in argument from evidence in 3–5 builds on K–2 experiences and progresses to critiquing the scientific explanations or solutions proposed by peers by citing relevant evidence about the natural and designed world(s).
- Support an argument with evidence, data, or a model. (5-LS1-1)

---

**Science Models, Laws, Mechanisms, and Theories Explain Natural Phenomena**

- Science explanations describe the mechanisms for natural events. (5-LS2-1)

---

**Disciplinary Core Ideas**

**5-PS3.D: Energy in Chemical Processes and Everyday Life**
- The energy released [from] food was once energy from the sun that was captured by plants in the chemical process that forms plant matter (from air and water). (5-PS3-1)

**5-LS1.C: Organization for Matter and Energy Flow in Organisms**
- Food provides animals with the materials they need for body repair and growth and the energy they need to maintain body warmth and for motion. (secondary to 5-PS3-1)
- Plants acquire their material for growth chiefly from air and water. (5-LS1-1)

**5-LS2.A: Interdependent Relationships in Ecosystems**
- The food of almost any kind of animal can be traced back to plants. Organisms are related in food webs in which some animals eat plants for food and other animals eat the animals that eat plants. Some organisms, such as fungi and bacteria, break down dead organisms (both plants or plants’ parts and animals) and therefore operate as “decomposers.” Decomposition eventually restores (recycles) some materials back to the soil. Organisms can survive only in environments in which their particular needs are met. A healthy ecosystem is one in which multiple species of different types are each able to meet their needs in a relatively stable web of life. Newly introduced species can damage the balance of an ecosystem. (5-LS2-1)

**5-LS2.B: Cycles of Matter and Energy Transfer in Ecosystems**
- Matter cycles between the air and soil and among plants, animals, and microbes as these organisms live and die. Organisms obtain gases, and water, from the environment, and release waste matter (gas, liquid, or solid) back into the environment. (5-LS2-1)

---

**Crosscutting Concepts**

- Systems and System Models
  - A system can be described in terms of its components and their interactions. (5-LS2-1)

- Energy and Matter
  - Matter is transported into, out of, and within systems. (5-LS1-1)
  - Energy can be transferred in various ways and between objects. (5-PS3-1)

---

**Connections to other DCIs in fifth grade**: 5-PS1.A (5-LS1-1), (5-LS2-1); 5-LS2.A (5-LS2-1)

**Articulation of DCIs across grade levels**: K.LS1.C (5-PS3-1); 1.LS1.A (5-LS2-1); 2.LS1.A (5-LS2-1); 2.LS2.A (5-PS3-1), (5-LS1-1); 2.LS4.D (5-LS2-1); 4.PS3.A (5-PS3-1); 4.PS3.B (5-PS3-1); 4.PS3.C (5-PS3-1); 4.PS3.D (5-PS3-1); 4.PS3.E (5-LS2-1); MS.PS3.D (5-PS3-1), (5-LS1-1); MS.PS4.B (5-PS3-1); MS.LS1.C (5-PS3-1), (5-LS1-1), (5-LS2-1); MS.LS2.A (5-LS2-1); MS.LS2.B (5-PS3-1), (5-LS2-1)

**New York State Next Generation Learning Standards Connections**

**ELA/Literacy**
- **SR1** Locate and refer to relevant details and evidence when explaining what a text says explicitly/implicitly and make logical inferences. (5-LS1-1)
- **SR7** Analyze how visual and multimedia elements contribute to meaning of literary and informational texts. (5-PS3-1), (5-LS1-1)
- **5W1** Write an argument to support claims with clear reasons and relevant evidence. (5-LS1-1)
- **5S5** Include digital media and/or visual displays in presentations to emphasize and enhance central ideas or themes. (5-PS3-1), (5-LS2-1)

**Mathematics**
- **MP.2** Reason abstractly and quantitatively. (5-LS1-1), (5-LS2-1)
- **MP.4** Model with mathematics. (5-LS1-1), (5-LS2-1)
- **MP.5** Use appropriate tools strategically. (5-LS1-1)
- **NY-5.MD.1** Convert among different-sized standard measurement units within a given measurement system when the conversion factor is given. Use these conversions in solving multi-step, real world problems. (5-LS1-1)

| Engaging in Argument from Evidence | PS2.B: Types of Interactions  
- The gravitational force of Earth acting on an object near Earth’s surface pulls that object toward the planet’s center. (5-PS2-1)  
ESS1.A: The Universe and its Stars  
- The sun is a star that appears larger and brighter than other stars because it is closer. Stars range greatly in their distance from Earth. (5-ESS1-1)  
ESS1.B: Earth and the Solar System  
- The orbits of Earth around the sun and of the moon around Earth, together with the rotation of Earth about an axis between its North and South poles, cause observable patterns. These include day and night; daily changes in the length and direction of shadows; and different positions of the sun, moon, and stars at different times of the day, month, and year. (5-ESS1-2) | Patterns  
- Similarities and differences in patterns can be used to sort, classify, communicate and analyze simple rates of change for natural phenomena. (5-ESS1-2)  
Cause and Effect  
- Cause and effect relationships are routinely identified and used to explain change. (5-PS2-1)  
Scale, Proportion, and Quantity  
- Natural objects exist from the very small to the immensely large. (5-ESS1-1) |

**Connections to other DCIs in fifth grade:** N/A

### Articulation of DCIs across grade-levels:

### New York State Next Generation Learning Standards Connections:

**ELA/Literacy -**

- **SR1** Locate and refer to relevant details and evidence when explaining what a text says explicitly/implicitly and make logical inferences. (5-PS2-1, 5-ESS1-1)
- **SR7** Analyze how visual and multimedia elements contribute to meaning of literary and informational texts. (5-ESS1-1)
- **SR8** Explain how claims in a text are supported by relevant reasons and evidence, identifying which reasons and evidence support which claims. (5-ESS1-1)
- **SW1** Write an argument to support claims with clear reasons and relevant evidence. (5-PS2-1, 5-ESS1-1)
- **SSL5** Include digital media and/or visual displays in presentations to emphasize and enhance central ideas or themes. (5-ESS1-2)

**Mathematics -**

- **MP.2** Reason abstractly and quantitatively. (5-ESS1-1, 5-ESS1-2)
- **MP.5** Use appropriate tools strategically. (5-ESS1-1, 5-ESS1-2)
- **NY-5.NBT.2** Use whole-number exponents to denote powers of 10. Explain patterns in the number of zeros of the product when multiplying a number by powers of 10, and explain patterns in the placement of the decimal point when a decimal is multiplied or divided by a power of 10. (5-ESS1-1)
- **NY-5.G.2** Represent real world and mathematical problems by graphing points in the first quadrant of the coordinate plane, and interpret coordinate values of points in the context of the situation. (5-ESS1-2)

### 3-5. Engineering Design

**Students who demonstrate understanding can:**

**3-5-ETS1-1.** Define a simple design problem reflecting a need or a want that includes specified criteria for success and constraints on materials, time, or cost.

**3-5-ETS1-2.** Generate and compare multiple possible solutions to a problem based on how well each is likely to meet the criteria and constraints of the problem.

**3-5-ETS1-3.** Plan and carry out fair tests in which variables are controlled and failure points are considered to identify aspects of a model or prototype that can be improved.

---

**The performance expectations above were developed using the following elements from the NRC document A Framework for K-12 Science Education:**

**Science and Engineering Practices**
