Utilizing the New Teacher-Support Features in the...

Brian Cohen  bcohen@skanschools.org

Goal
Gain more insight into the types of support features built into the new standards, where they came from, and how they support implementation.

Agenda
1. Vision & objectives of the new standards document
2. Dig into the standards at your grade level
3. Share & discuss worthwhile supports
4. Highlight a couple more substantial changes to the content of the standards (if time allows)
In 2012, at UC Berkeley, Bill McCallum talks about the worthwhile residue left behind when the CCSS-M collapses. He offers, for example, that well developed research-based curricula may endure and benefit students long after the CCSS-M.

As NYS moves forward from the CCSS, we wanted to:

- Keep some the good parts.
- Leave behind what didn’t work for us.
- Make improvements and upgrades wherever possible.

Standards Document - Current

Counting & Cardinality

Know number names and the count sequence.
1. Count to 100 by ones and by tens.
2. Count forward beginning from a given number within the known sequence (instead of having to begin at 1).
3. Write numbers from 0 to 20. Represent a number of objects with a written numeral 0-20 (with 0 representing a count of no objects).

Count to tell the number of objects.
4. Understand the relationship between numbers and quantities; connect counting to cardinality.
   a. When counting objects, say the number names in the standard order, pairing each object with one and only one number name and each number name with one and only one object.
   b. Understand that the last number name said tells the number of objects counted. The number of objects is the same regardless of their arrangement or the order in which they were counted.
   c. Understand that each successive number name refers to a quantity that is one larger.
   d. Develop understanding of ordinal numbers (first through tenth) to describe the relative position and magnitude of whole numbers.

5. Count to answer “how many?” questions about as many as 20 things arranged in a line, a rectangular array, or a circle, or as many as 10 things in a scattered configuration; given a number from 1–20, count out that many objects.

Compare numbers.
6. Identify whether the number of objects in one group is greater than, less than, or equal to the number of objects in another group, e.g., by using matching and counting strategies.¹
7. Compare two numbers between 1 and 10 presented as written numerals.

¹ Include groups with up to ten objects.

Examples of Key Advances from Kindergarten to Grade 1
- Students gradually come to employ mental strategies (such as counting on and making ten) that make use of embedded concepts of number and the properties of addition and subtraction; by contrast, kindergarten students determine sums and differences primarily by representing problems with objects or drawings.

Fluency Expectations or Examples of Culminating Standards
1.OA.C.6 Add and subtract within 20, demonstrating fluency for addition and subtraction within 10. Use strategies such as counting on; making ten (e.g., 8 + 6 = 8 + 2 + 4 = 10 + 4 = 14); decomposing a number leading to a ten (e.g., 13 - 4 = 13 - 3 - 1 = 10 - 1 = 9); using the relationship between addition and subtraction (e.g., knowing that 8 + 4 = 12, one knows 12 - 8 = 4); and creating equivalent but easier or known sums (e.g., adding 6 + 7 by creating the known equivalent 6 + 6 + 1 = 12 + 1 = 13).

Examples of Major Within-Grade Dependencies
- 1.NBT.B.2 describes the place-value foundations for 1.NBT.B.3 and 1.NBT.C.4. Comparing numbers (1.NBT.B.3) involves thinking about the sizes of tens and ones, and adding two-digit numbers (1.NBT.C.4) involves adding tens with tens and ones with ones, and sometimes composing a ten. These ideas and methods rest on an understanding of the place-value units and the use of visual models of these units in solving and explaining problems using these standards.
The importance of specifying the whole

Without specifying the whole, it is not reasonable to ask what fraction is represented by the shaded area. If the left square is the whole, the shaded part is 1/4 of the entire rectangle.

The word *fluent* is used in the Standards to mean “fast and accurate.” Fluency in each grade involves a mixture of just knowing some answers, knowing some answers from patterns (e.g., “adding 0 yields the same number”), and knowing some answers from the use of strategies. It is important to push sensitively and encouragingly toward fluency of the designated numbers at each grade level, recognizing that fluency will be a mixture of these kinds of thinking which may differ across students. The extensive work relating addition and subtraction means that subtraction can frequently be solved by thinking of the related addition, especially for smaller numbers. It is also important that these patterns, strategies and decomposing...

**Counting & Cardinality**

K.CC

Know number names and the count sequence.
1. Count to 100 by ones and by tens.
2. Count forward beginning from a given number within the known sequence (instead of having to begin at 1).
3. Write numbers from 0 to 20. Represent a number of objects with a written numeral 0-20 (with 0 representing a count of no objects).

Count to tell the number of objects.
4. Understand the relationship between numbers and quantities; connect counting to cardinality.
   a. When counting objects, say the number names in the standard order, pairing each object with one and only one number name and each number name with one and only one object.
   b. Understand that the last number name said tells the number of objects counted. The number of objects is the same regardless of their arrangement or the order in which they were counted.
   c. Understand that each successive number name refers to a quantity that is one larger.
   d. **Develop understanding of ordinal numbers (first through tenth)** to describe the relative position and magnitude of whole numbers.
5. Count to answer “how many?” questions about as many as 20 things arranged in a line, a rectangular array, or a circle, or as many as 10 things in a scattered configuration; given a number from 1–20, count out that many objects.

Compare numbers.
6. Identify whether the number of objects in one group is greater than, less than, or equal to the number of objects in another group, e.g., by using matching and counting strategies.\(^1\)
7. Compare two numbers between 1 and 10 presented as written numerals.

\(^1\) Include groups with up to ten objects.

Add and subtract within 20.

2a. Fluently add and subtract within 20 using mental strategies. Strategies could include:

- Coherence: NY-1.OA.6 → NY-2.OA.2
Standards Document – A better way!

NY-2.OA Operations and Algebraic Thinking

Add and subtract within 20.
3a. Fluently add and subtract within 20 using mental strategies. Strategies could include:

- making ten;
- decomposing a number leading to a ten;
- using the relationship between addition and subtraction; and
- counting on;

3b. Know from memory all sums within 20 of two one-digit numbers.

- e.g., 13 – 4 =
  13 – 3 – 1 =
  10 – 1 = 9
Standards Document – A better way!

Note on Fluency with Facts:
• Fluently adding and subtracting within 20 (NY-2.OA.2) means students can find sums and differences within 20 reasonably quickly, and say or write it. Fluency involves a mixture of just knowing some answers, knowing some answers from patterns, and knowing some answers from the use of strategies. Reaching fluency will take much of the year for many students. For more on how children develop fluency, see K–5 Progression on Counting and Cardinality and Operations and Algebraic Thinking, pp. 18-19 and Adding it Up, pp. 182-195.

Note on Fluency vs. Knowing from Memory:
• The standards intentionally distinguish between asking for fluency with addition and subtraction (NY-2.OA.2a) and asking students to know from memory addition facts (NY-2.OA.2b). Fluency means students are fast, accurate, flexible, and have understanding. They use strategies efficiently. By the end of the K–2 grade span, students have sufficient experience with these strategies to know from memory all single-digit sums.

Standards Document – A better way!

NY-2.OA
Operations and Algebraic Thinking

Add and subtract within 20.

2a. Fluently add and subtract within 20 using mental strategies. Strategies could include:
• counting on;
• making ten;
• decomposing a number leading to a ten;
Standards Document – A better way!

- Standards tagging is distinct from, but connected to CCSS
- Embed support at point-of-use:
  - “Coherence Links” to show the vertical coherence of the standards and help teachers differentiate (especially for students with IEPs and ELLs).
  - Notes and illustrations to clarify individual standards, answer FAQs, or otherwise support implementation
  - “Within-Grade Connections” to show horizontal coherence
  - Notes highlighting connections between the Standards for Mathematical Practice and content standards
  - Footnotes from the original standards
- Linked navigation
- HS standards organized by course (not by Conceptual Category) and tagged to make the course clear
- Algebra I and Algebra II shared standards clearly marked
## Treasure Hunt
