Converting **CLASS**™ Scores to Performance Ratings

Teacher: _____   Observer: _____

School Year: _____   Center/School: _____

Enter the Domain Average for each domain in the boxes below. Divide by 3 to get the Overall Average.

$$\left(\begin{array}{c} \textbf{Emotional Support} \\ \textbf{Domain Average} \\ \square \end{array} + \begin{array}{c} \textbf{Classroom Organization} \\ \textbf{Domain Average} \\ \square \end{array} + \begin{array}{c} \textbf{Instructional Support} \\ \textbf{Domain Average} \\ \square \end{array} \right) \div 3 = \begin{array}{c} \textbf{Overall} \\ \textbf{Average} \\ \square \end{array}$$

Overall Average	Performance Rating Category	Check One
5.00 - 7.00	**Highly Effective** The observations found strong evidence of effective interactions as defined by the CLASS domains. Interactions were not only high in quality overall, but also within each of the domains.	☐
4.00 - 4.99	**Effective** The observations found consistent evidence of effective interactions as defined by the CLASS domains. Though every interaction may not have been high in quality, there was a pattern of quality and effectiveness throughout the observations.	☐
3.00 - 3.99	**Developing Effectiveness** The observations found some evidence of effective interactions as defined by the CLASS domains. However, the evidence was minimal or inconsistent.	☐
1.00 - 2.99	**Ineffective** The observations found limited evidence of effective interactions as defined by the CLASS domains.	☐
