**Guiding Question:** *What was the Great Depression?*

**Historians** have different opinions about the cause of the Great Depression. Some **economists** believe that a lack of **confidence** in the stock market caused people to stop **investing** and this led to depression. Classical	Having to do with ancient Greek and Roman culture	
Inevitably	Unavoidably; without being able to stop or change anything	I knew that a teacher who coddled them at that age would only hold them back, would keep them in the bosoms of their mothers so long that they would remain weak-minded through preparatory school and <b>inevitably</b> then through college.

Internal	Inside oneself	I don’t know how long I stood there, between the school assembled behind me and the two boys seated in front, but after a period of <b>internal</b> deliberation, during which time I could hear the rising murmurs of the audience, I decided that in the long run it was best for Sedgewick Bell to be caught.
Ignore	Refuse to recognize or notice	“ <b>Ignore</b> it,” he whispered back.

Behalf	Representation of someone who is not present (used with "on" and followed by "of")	He was not an ineloquent man, and he chose to speak his plea first, so that by the time he had finished his attack against antiquity, I sensed that my battle on <b>behalf</b> of Charles Ellerby, and of history itself, was near to lost.

<b>What Is Autism?</b> <b>(also known as Autism Spectrum Disorder)</b>	
<p>In preparation for reading an excerpt from the book <i>Animals in Translation</i>, we are going to learn a little about autism. The author of the book is autistic. Read the following quotes from the text, and then answer the questions that follow.</p>	
<p><b>Guiding Question:</b> <i>People with autism are different from people without it in many ways. Summarize some of the ways they are different. There are also ways that they are the same. Describe some of the ways they are the same (e.g., school and social life can be hard; love of animals).</i></p>	
Text Excerpts	Glossary
<p>“People who aren’t autistic always ask me about the moment I realized I could understand the way animals think” (p. 1).</p> <p>“Animals are like autistic savants. In fact, I’d go so far as to say that animals might actually <i>be</i> autistic savants. Animals have special talents normal people don’t; the same way autistic people have special talents normal people don’t; and at least some animals have special forms of genius normal people don’t, the same way some autistic savants have special forms of genius” (p. 8).</p> <p>“It took me a long time to figure out that I see things about animals other people don’t.... “I started to fall in love with animals in high school when my mother sent me to a special boarding school for gifted children with emotional problems. Back then they called everything ‘emotional problems’” (p. 1).

They called me Tape Recorder because I’d stored up a lot of phrases in my memory and I used them over and over again in every conversation. Plus there were only a few conversations I liked to have” (pp. 1–2).

When I say I’m a visual thinker I don’t mean just that I’m good at making architectural drawings and designs.... I actually think in pictures. During my thinking process I have no words in my head at all, just pictures (p. 17).

### Additional Topics

Students also may benefit from background information in the following areas to support their comprehension of the text: (1) visual thinking, (2) B.F. Skinner and behaviorism, (3) Ole Ivar Lovaas, and (4) feedlots. The following summaries provide key information on these topics that could be used as a starting place for developing activities for students that build their background knowledge of these topics.

**Visual thinking** is the phenomenon of thinking through visual processing. Visual thinking uses the right side of the brain (the side that is emotional and creative) to organize information. It has been described as seeing words as a series of pictures. It is thought that approximately 30 percent of the population strongly uses visual or spatial thinking. Temple Grandin makes a connection between visual thinkers and autism.

**Behaviorism** is an approach to psychology that emerged in the early twentieth century as a reaction against “mentalistic” psychology that often had difficulty making predictions that could be tested with rigorous experimental methods. The primary tenet of behaviorism, as expressed in the writings of John B. Watson, B. F. Skinner, and others, is that psychology should concern itself with the observable behavior of people and animals, not with unobservable events that take place in their minds. Behaviorists believe that behaviors can be explained scientifically without

making connections to either to internal physiological events or to hypothetical constructs such as thoughts and beliefs.

**Burrhus Frederic (B.F.) Skinner** (March 20, 1904–August 18, 1990) was a U.S. psychologist, author, and inventor. He believed that human will was an illusion and that individuals acted on the basis of the consequences of their actions. If the consequences were bad, it was unlikely that the behavior would be repeated, but if the consequences were good, there was a good chance that the behavior would be repeated. He called this idea the principle of reinforcement. Skinner followed the Behaviorist school of thought.

**Variable reinforcement** is a reinforcement schedule in which the timing and or delivery of the reinforcer is unpredictable.

**Intermittent reinforcement** is a reinforcement schedule in which certain behavior results in desirable consequences only some of the time.

**Delayed reinforcement** is a reinforcement schedule in which a delay occurs between the conditioned response and the delivery of the reinforcement.

**Ole Ivar Lovaas** (May, 8 1927–August, 2 2010) was a Norwegian-American clinical psychologist at the University of California at Los Angeles. He is considered to be one of the fathers of applied behavior analysis. This was formerly called behavior modification. Dr. Lovaas was one of the first to prove that the behavior of autistic children could be changed through teaching.

**Feedlots** or feed yards are places where large numbers of animals such as cows, pigs, turkeys, and chickens are kept and fed before they are killed and sold for their meat.
