To: District Superintendents
Superintendents of Public Schools
Public School Administrators
Nonpublic School Administrators
Charter School Administrators

From: Angélica Infante-Green *A. Infante-Green*

Subject: Technology Literacy

Date: October 24, 2017

Technology is a powerful tool, and should be utilized in everyday instruction, across all subjects, to enhance teaching and learning. The definition of technology literacy should broadly encompass the technology knowledge and skills students must learn to be successful in school, college, and careers in the 21st Century.

To better understand the current landscape, needs, and challenges related to technology literacy, NYSED released a survey in February 2017 that asked respondents to provide feedback on a number of topics related to this subject. The survey was then re-opened in May 2017 to ensure all stakeholders had the opportunity to respond. In total, NYSED received 3375 responses, over 70% of which were from New York State teachers. The following common themes were immediately apparent:

1. **A need exists for a common statewide understanding of student technology literacy.** 93% of respondents indicated that a common understanding is needed.
2. **Technology integration decisions are most often left to individual teacher discretion.** Few respondents indicated that technology is embedded in school- or district-wide technology maps.
3. **School and District Leadership play the key role in technology literacy instruction.** While respondents look to organizations such as the International Society for Technology in Education (ISTE), the majority of respondents look to their school or district for guidance on technology literacy.

Takeaways from this Morning

- The “What” and the “How” (and how technology fits in)
- Follow a student
 - Voice
 - Engagement
 - Individual needs
 - Belonging
- Preparing students for jobs that don’t yet exist
- Personalized, differentiated, adapted, culturally & linguistically relevant, and context-based

Technology and Mathematics

Changing expectations for mathematics achievement

To prepare students for the changes in the way we live and work, and to be sure that our education system keeps pace with what it means to be mathematically literate and what it means to **collaboratively problem solve**, we need a different approach to daily teaching and learning. We need content-rich standards that will serve as a platform for advancing children's **21st-century** mathematical skills —their abstract reasoning, their collaboration skills, their ability to **learn from peers and through technology**, and their flexibility as a learner in a dynamic learning environment.

Technology and Mathematics

- Today's children live in a society where
 - many of their peers are from diverse backgrounds and speak different languages
 - technology is ubiquitous and central to daily life
- They will enter a workforce and economy that demands
 - critical thinking skills
 - strong communication and social skills
 - significant attention to STEM

Standards for Mathematical Practice

5. Use appropriate tools strategically.

- Mathematically proficient students consider the available tools when solving a mathematical problem.
- Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations.
 - Analyze graphs of functions and solutions generated using a graphing calculator
 - Technology can enable them to visualize the results of varying assumptions, explore consequences, and compare predictions with data.
 - Identify relevant external mathematical resources, such as digital content located on a website, and use them to pose or solve problems.
 - Use technological tools to explore and deepen their understanding of concepts.

Technology in MS Math Standards

NY-7.G Geometry

- **Draw, construct, and describe geometrical figures and describe the relationships between them.**
- 2. Draw triangles when given measures of angles and/or sides, noticing when the conditions determine a unique triangle, more than one triangle, or no triangle.
 - Note: Create triangles through the use of freehand drawings, materials (scaffolds may include: pipe cleaners, Legos®, and toothpicks), rulers, protractors, and/or technology.

NY-8.G Geometry

- **Understand congruence and similarity using physical models, transparencies, or geometry software.**

High School – Modeling with Technology

- When making mathematical models, technology is valuable for varying assumptions, exploring consequences, and comparing predictions with data.
- Diagrams of various kinds, spreadsheets and other technology, and algebra are powerful tools for understanding and solving problems drawn from different types of real-world situations.
- Graphing utilities, spreadsheets, computer algebra systems, and dynamic geometry software are powerful tools that can be used to model purely mathematical phenomena (e.g., the behavior of polynomials) as well as physical phenomena.

Technology in HS Math Standards

AI-A.REI Algebra - Reasoning with Equations and Inequalities

- Given the equations $y = f(x)$ and $y = g(x)$:
- ii) find the solutions approximately using technology to graph the functions or make tables of values

AI-F.IF Algebra - Interpreting Functions

- 7. Graph functions and show key features of the graph by hand and by using technology where appropriate. ★

AI-F.BF Algebra - Building Functions

- 3a. Using $f(x) + k$, $k f(x)$, and $f(x + k)$:
- iv) use technology to experiment with cases and explore the effects on the graph.

AI-S.ID Statistics and Probability

- 8. Calculate (using technology) and interpret the correlation coefficient of a linear fit.

Technology in HS Geometry

- Use of a variety of tools and methods for construction is encouraged.
 - Includes dynamic geometric software
- Dynamic geometry environments
 - Provide students with experimental and modeling tools that allow them to investigate geometric phenomena using visualization, reasoning, and geometric modeling to solve problems
 - Allow students to create geometric models and ideas to solve not only problems in mathematics, but in other disciplines or everyday situations.

Literacy for History/SS, Science, and Technical Subjects

What is Literacy?

A high degree of proficiency in literacy is essential as students attempt to acquire and build knowledge in each of the content areas. Students must be able to read social studies textbooks, analyze historical documents, follow scientific procedures, and discuss complex written problems, as well as respond to issues in their subject area content through speaking, writing, and **crafting digital responses**.

Literacy for History/SS, Science, and Technical Subjects

What is Literacy?

A high degree of proficiency in literacy is essential as students attempt to acquire and build knowledge in each of the content areas. Students must be able to read social studies textbooks, analyze historical documents, follow scientific procedures, and discuss complex written problems, as well as respond to issues in their subject area content through speaking, writing, and **crafting digital responses**.

- In all technical subjects, students encounter charts, graphs, diagrams, maps, and data sets presented in a variety of media. They must be able to understand and analyze these data in a variety of formats (Reading Standard 7).

Reading Standard 7: H/SS

- 6-8: Integrate visual information (e.g., in charts, graphs, photographs, videos, or maps) with other information in print and digital texts.
- 9-10: Integrate and evaluate visual and technical information (e.g., in research data, charts, graphs, photographs, videos, or maps) with other information in print and digital texts.
- 11-12: Integrate and evaluate multiple sources of information presented in diverse formats and media (e.g., visually, quantitatively, as well as in words) in order to address a question or solve a problem.

Reading Standard 7: ST

- 6-8: Identify and match scientific or technical information presented as text with a version of that information presented visually (e.g., in a flowchart, diagram, model, graph, or table).
- 9-10: Translate scientific or technical information expressed as written text into visual form (e.g., a table or chart), and translate information expressed visually or mathematically (e.g., in an equation) into words.
- 11-12: Integrate and evaluate multiple sources of information presented in diverse formats and media (e.g., quantitative data, video, multimedia) in order to address a question or solve a problem.

Range of Text Types

- Informational Text in both print and digital sources
- Discipline-specific material, including
 - Blogs/websites
 - Texts written by members of a discipline community for others in that community, such as articles appearing in professional journals and on the websites of professional organizations

Technology and Writing for History/SS, Science, and Technical Subjects

- The standards for writing require students to use technology to produce and publish their analyses (Writing Standard 6)
- **Standard 6:** Gather relevant information from multiple sources, assess the credibility and accuracy of each source, and integrate the information while avoiding plagiarism. Use technology, including the Internet, to produce and publish writing and to interact and collaborate with others.

ELA Introduction

The rate at which knowledge is generating and shared today, often via **technology**, is unprecedented in human history... Today's children must also become adults who are able to **communicate** and **navigate** an **increasingly interconnected society**—one in which literacy skills are routinely called upon. In other words, all students in NYS classrooms must develop advanced literacies. *Advanced literacies* denote a set of skills and competencies that enable communication, spoken and written, in **increasingly diverse ways** and with **increasingly diverse audiences**.

ELA Introduction: Additional Guidelines

- The development of all literacy skills requires extensive opportunities to practice, especially with authentic texts and **real-life communication situations**, including authentic social, cultural, professional, and academic contexts.
- The standards address a student’s ability to read, listen to, and view creative works in various genres and across various cultures. In addition to acquiring knowledge about the history, forms, and artistic craft of the works studied, students are expected to develop informed written, spoken, visual, and **digital responses**.
- The word “text” should be construed as encompassing far more than printed material. Text may also refer to **speech, graphics, visual art, digital representations, video, and other visual and audio** depictions of ideas, concepts, and experiences.

ELA Introduction: Additional Guidelines

- Students should understand and be able to observe the differences between the form and function of the conventions of academic English and features of informal written communication, speech, and **electronic communication**, with the goal of furthering their capacity to **communicate with broader audiences** using both conversational and academic English.
- The standards include frequent references to **digital media**. Students must **achieve fluency and develop skilled practice in the use of current media**, and, given the pace of technological development, they must be able to adapt quickly to new media as they develop.

ELA Introduction: Additional Guidelines

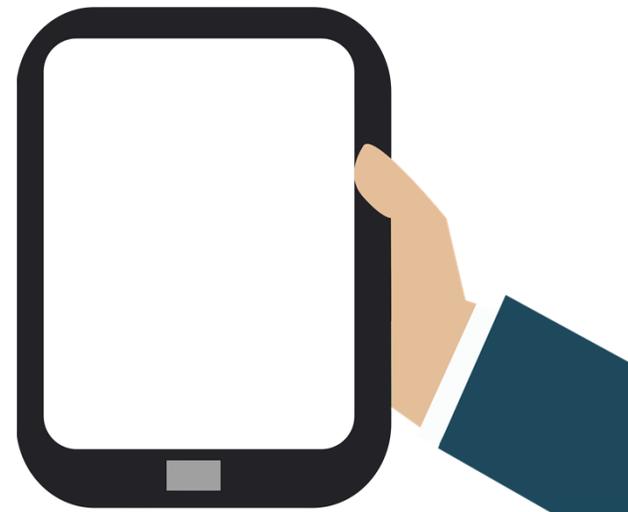

- Students should understand and be able to observe the differences between the form and function of the conventions of academic English and features of informal written communication, speech, and **electronic communication**, with the goal of furthering their capacity to **communicate with broader audiences** using both conversational and academic English.
- The standards include frequent references to **digital media**. Students must **achieve fluency and develop skilled practice in the use of current media**, and, given the pace of technological development, they must be able to adapt quickly to new media as they develop. **It is the case that what it means to be literate is evolving, and digital literacy encompasses an important area that must be addressed instructionally as a matter of equity.**

Technology in the Reading Standards

Range of Student Reading Experiences

- **Informational Text:** Both print and digital sources

Reading Standard 7 in 6-8

- 6R7: Compare and contrast how different formats, including print and digital media, contribute to the understanding of a subject. (RI&RL)
- 7R7: Compare and contrast a written text with audio, filmed, staged, or digital versions in order to analyze the effects of techniques unique to each media and each format's portrayal of a subject. (RI&RL)
- 8R7: Evaluate the advantages and disadvantages of using different media-- text, audio, video, stage, or digital-- to present a particular subject or idea and analyze the extent to which a production remains faithful to or departs from the written text. (RI&RL)

Technology in the Writing Standards

Lifelong Practices of Writers:

- Writers write often and widely in a variety of formats, using print and digital resources and tools.

Technology in the Writing Standards

- Grades PreK–1:
 - Begin to learn about how technology and digital tools for writing can increase learning and communication (e.g., use technology to write, draw, and explore concepts)
- Grades 2-12:
 - Learn about various tools (print and digital) to produce, share, and publish writing
 - As part of their writing development, students should continue to learn about how technology and digital tools for writing can increase learning and communication

Technology in the Writing Standards

- 9-10 and 11-12 W7:
 - Gather relevant information from multiple sources, using advanced searches effectively

this exact word or phrase:

Technology in the Speaking and Listening Standards

Standard 5: Make strategic use of digital media and visual displays to express information and enhance understanding of presentations.

Include digital media and/or visual displays in presentations to

- 2SL5: clarify or support ideas, thoughts, and feelings
- 3SL5: emphasize certain facts or details
- 4SL5: emphasize central ideas or themes
- 5SL5: emphasize and enhance central ideas or themes.
- 6SL5: clarify information and emphasize and enhance central ideas or themes
- 7SL5: clarify claims and findings and emphasize salient points
- 8SL5: clarify information, strengthen claims and evidence, and add elements of interest to engage the audience.
- 9-10 and 11-12 SL5: enhance understanding of findings, reasoning, and evidence, and to add elements of interest to engage the audience.

Keyboarding

Guidance: Keyboarding Instruction

The University of the State of New York

The State Education Department

Guidance:

Keyboarding Instruction

2017

Keyboarding Instruction

As the use of technology for teaching, learning, and assessment becomes more prevalent in New York State schools, and as teachers and leaders continue to make decisions that ensure their students are receiving a quality, 21st Century education, the topic of keyboarding instruction will and must emerge as a focus area.

Keyboarding, the ability to operate a keyboard efficiently while typing, is an important skill that allows students to write fluently and communicate more effectively, and is critical to success in school, college, and careers in the 21st Century.

Keyboarding

| Grade(s) | Keyboarding Instruction Expectations in NYS Next Generation English Language Arts Learning Standards | Page |
|------------|---|------------|
| PreK | Students should begin to explore keyboards. | 12 |
| K | Students should explore keyboards. | 18 |
| 1 | Students should continue to explore keyboards. | 25 |
| 2 | Students should be introduced to keyboarding. | 32 |
| 3 and 4 | Students should receive instruction in keyboarding, with a focus on technique over speed. | 39, 46 |
| 5 and 6 | Students should continue to improve keyboarding skills, with a focus on increasing speed as well as accuracy. | 53, 60 |
| 7, 8, 9/10 | Students should continue to improve keyboarding skills to increase speed and accuracy. | 68, 74, 83 |
| 11/12 | Students should demonstrate proficient keyboarding skills. | 90 |

Several Teachers' Responses

Positive Outcomes of the Change...

- Organization is no longer an issue
- No more “forgotten” homework at home
- No need for a pencil/pen
- No need to decipher handwriting
- Absent/transfer students can get caught up faster
- Instant communication to students
- Increased collaboration
- Information at their fingertips

Personalized Learning

“Personalized learning is tailoring learning for each student’s strengths, needs and interests, including enabling student voice and choice in what, how, when, and where they learn, to provide flexibility and supports to ensure mastery at the highest standards possible.”

Mean What You Say: Integrating Personalized, Blended and

Competency Education Patrick, Kennedy, Powell, iNACOL 2013

Personalized Learning

Personalization
vs.
Differentiation
vs.
Individualization

Personalization v Differentiation v Individualization Chart (v3)

There is a difference between personalization, differentiation, and individualization. One is learner-centered; the others are teacher-centered.

| Personalization | Differentiation | Individualization |
|--|--|--|
| The Learner... | The Teacher... | The Teacher... |
| drives their learning. | provides instruction to groups of learners. | provides instruction to an individual learner. |
| connects learning with interests, talents, passions, and aspirations. | adjusts learning needs for groups of learners. | accommodates learning needs for the individual learner. |
| actively participates in the design of their learning. | designs instruction based on the learning needs of different groups of learners. | customizes instruction based on the learning needs of the individual learner. |
| owns and is responsible for their learning that includes their voice and choice on how and what they learn. | is responsible for a variety of instruction for different groups of learners. | is responsible for modifying instruction based on the needs of the individual learner. |
| identifies goals for their learning plan and benchmarks as they progress along their learning path with guidance from teacher. | identifies the same objectives for different groups of learners as they do for the whole class. | identifies the same objectives for all learners with specific objectives for individuals who receive one-on-one support. |
| acquires the skills to select and use the appropriate technology and resources to support and enhance their learning. | selects technology and resources to support the learning needs of different groups of learners. | selects technology and resources to support the learning needs of the individual learner. |
| builds a network of peers, experts, and teachers to guide and support their learning. | supports groups of learners who are reliant on them for their learning. | understands the individual learner is dependent on them to support their learning. |
| demonstrates mastery of content in a competency-based system. | monitors learning based on Carnegie unit (seat time) and grade level. | monitors learning based on Carnegie unit (seat time) and grade level. |
| becomes a self-directed, expert learner who monitors progress and reflects on learning based on mastery of content and skills. | uses data and assessments to modify instruction for groups of learners and provides feedback to individual learners to advance learning. | uses data and assessments to measure progress of what the individual learner learned and did not learn to decide next steps in their learning. |
| Assessment AS and FOR Learning with minimal OF Learning | Assessment OF and FOR Learning | Assessment OF Learning |
