

Welcome!

- The webinar will begin at 9 am.
- Please use the chat if you need to communicate with the SED team regarding any technical issues.
- If your site has a question regarding the briefs, please use the Q&A feature.
- The SED team can be reached via email to P12StandardsInstruction@nysed.gov or by calling 518-474-5922.

An Overview of the NYSED Numeracy Briefs with Dr. Deborah Loewenberg-Ball

Tuesday, May 13, 2025

Outcomes

- Review Briefs Roadmap: Evidence-Based Practices for Teaching Mathematics
- Read and understand the eight numeracy briefs.
- Reflect on how the numeracy briefs relate to your current role in education.
- Commit to one leadership move you can make to enhance numeracy in your school, district, or BOCES.

Overview of Briefs & Roadmap

Evidence-Based Practices for Teaching Mathematics

Understanding Evidence-Based Practices for Teaching Mathematics

Using Evidence-Based Practices for Teaching Mathematics

Key Ideas and Myths

What does the research tell us about mathematics teaching and learning?

High-Leverage Content and Practices

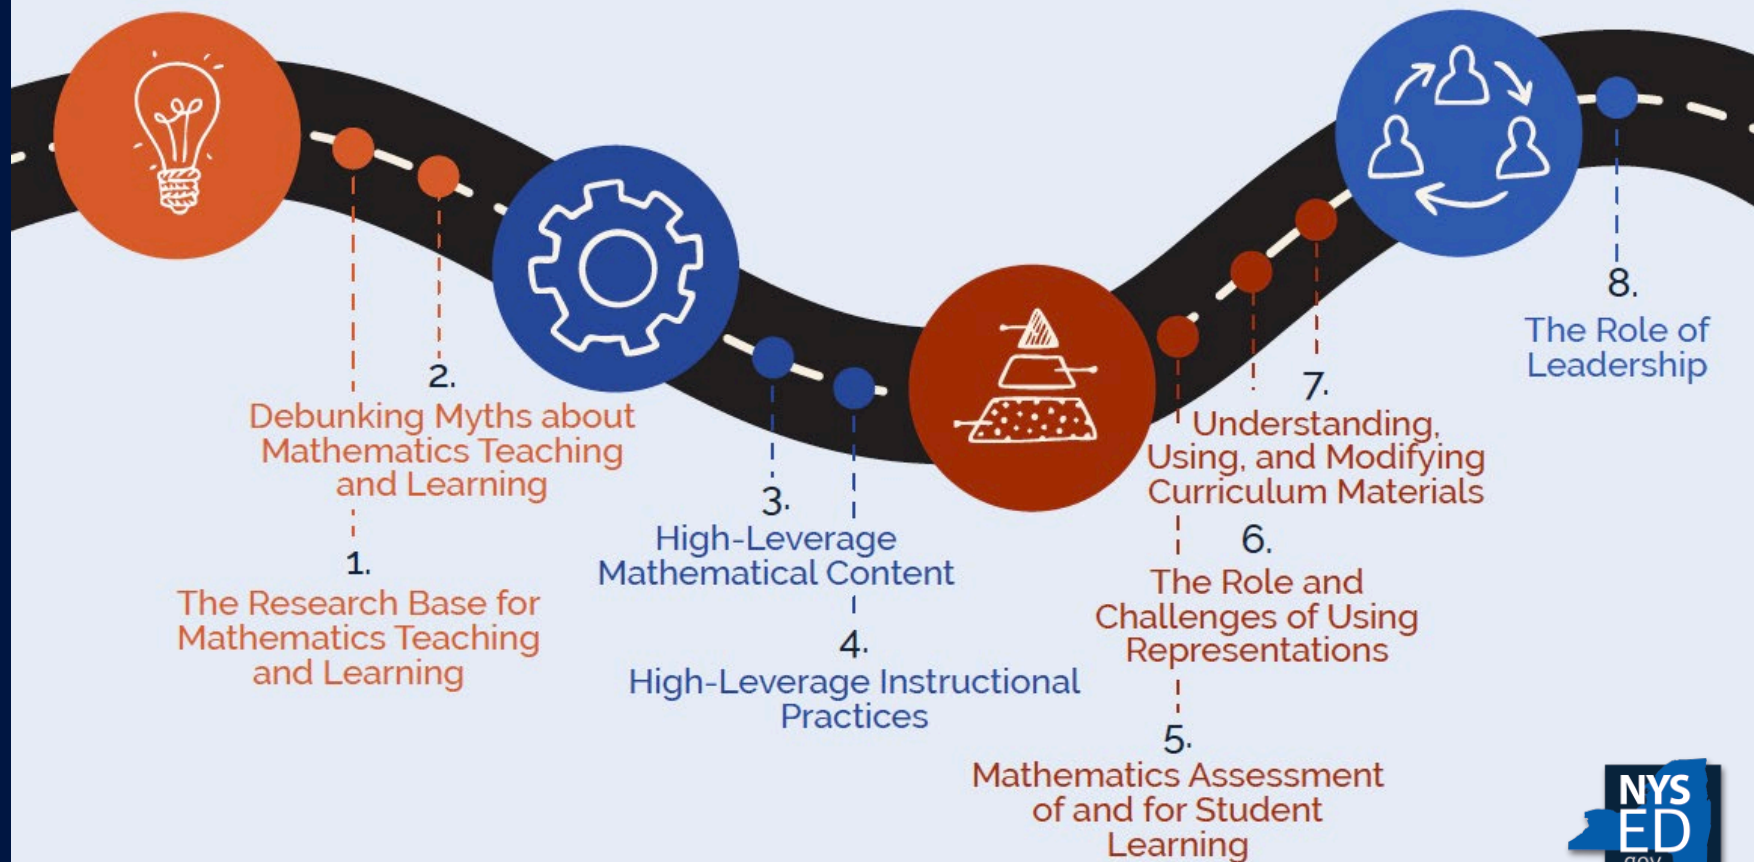

What do teachers need to know and be able to do to teach mathematics?

Key Evidence-Based Instructional Practices

How can teachers best use the resources they are given to teach mathematics?

Leading for Mathematical Proficiency

How can leaders support evidence-based mathematics teaching?

Research Base for and Debunking Myths about Mathematics Teaching and Learning

Overview of NYSED Numeracy
Briefs 1 and 2

Brief 1:

The Research Base for Mathematics Teaching and Learning

Supporting Evidence-Based P–12 Mathematics Teaching Practice

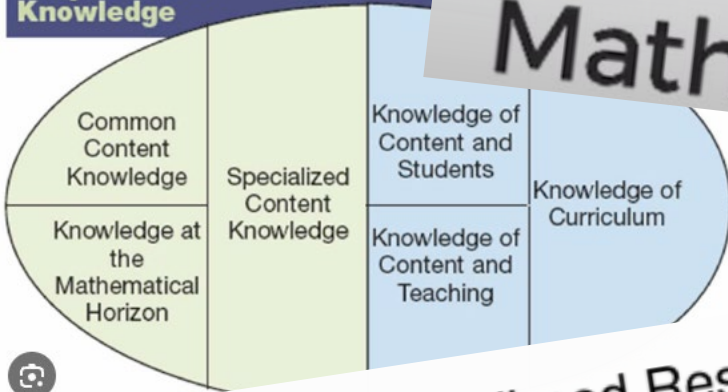

The Research Base

1. Skillful mathematics teaching makes use of instructional practices that develop all **strands of mathematical proficiency**.
2. Research-based **learning trajectories** provide teachers with information about students' progress toward fluency and conceptual understanding.
3. Research on mathematics teaching and learning highlights the importance of **culturally responsive and sustaining learning environments**.
4. Research on mathematics teaching and learning shows that **teachers' own relationship to and understanding of mathematics** is crucial for supporting positive student development.

Research by Ed School psychologist reinforces case for stressing multiple problem-solving paths over memorization

EDThoughts: What We Know about Mathematics Teaching and Learning.

The Strands of Mathematical Proficiency

- **Adaptive Reasoning:** Capacity for logical thought, reflection, explanation, and justification.
- **Strategic Competence:** Ability to formulate, represent, and solve mathematical problems.
- **Conceptual Understanding:** Comprehension of mathematical concepts, operations, and relations.
- **Productive Disposition:** Habitual inclination to see mathematics as sensible, useful, and worthwhile, coupled with a belief in diligence and one's own efficacy.
- **Procedural Fluency:** Skill in carrying out procedures flexibly, accurately, efficiently, and appropriately

From *Adding It Up: Helping Children Learn Mathematics*, by the National Research Council, 2001, p. 117.

Copyright 2001 by the National Academy of Science.

A glass sphere and a glass pyramid are positioned on a dark, reflective surface against a deep blue background. The sphere is in the upper right, and the pyramid is in the lower center. Warm, orange light from below creates a strong glow and reflection on the glass objects and the surface.

Brief 2:

Debunking Myths about Mathematics Teaching and Learning

Supporting Evidence-Based P–12 Mathematics Teaching Practice

Myths

Myth #1: “Ability” grouping improves success.

Myth #2: Most students struggle in mathematics.

Myth #3: Mathematical competence means being efficient and accurate.

Myth #4: Developing competence requires isolated repetition and drills.

Myth #5: The most effective teaching method is providing step-by-step procedures for solving problems.

Myth #6: “Inquiry” approaches leave students to learn on their own instead of teaching them mathematics.

Myth #7: Success in calculus is the ultimate goal of school mathematics.

What is a Myth? The Importance of Nuance

Myth #1: “Ability” grouping improves success.

Myth #2: Most students struggle in mathematics.

Myth #3: Mathematical competence means being efficient and accurate.

Myth #4: Developing competence requires isolated repetition and drills.

Myth #5: The most effective teaching method is providing step-by-step procedures for solving problems.

Myth #6: “Inquiry” approaches leave students to learn on their own instead of teaching them mathematics.

Myth #7: Success in calculus is the ultimate goal of school mathematics.

Invert & Multiply

$$1 \div \frac{1}{5} = 5 \quad 2 \div \frac{2}{5} =$$
$$1 \div \frac{2}{5} = \frac{5}{2}$$
$$1 \div \frac{3}{5} = \frac{5}{3}$$
$$1 \div \frac{4}{5} = \frac{5}{4}$$

Write a story problem for $2 \div \frac{2}{5} = 5$.

Myths

Myth #1: “Ability” grouping improves success.

Myth #2: Most students struggle in mathematics.

Myth #3: Mathematical competence means being efficient and accurate.

Myth #4: Developing competence requires isolated repetition and drills.

Myth #5: The most effective teaching method is providing step-by-step procedures for solving problems.

Myth #6: “Inquiry” approaches leave students to learn on their own instead of teaching them mathematics.

Myth #7: Success in calculus is the ultimate goal of school mathematics.

Step By Step Procedures or Inquiry?

Steps for Naming a Fraction Correctly

1. What is the whole? Trace around the whole.
 2. Is the whole divided into equal parts? YES or NO
If no, divide it into equal parts.
 3. How many equal parts does it take to make the whole?
 4. What do you call one of the equal parts? $\frac{1}{d}$
 5. How many equal parts are shaded? (n)
 6. What is the name of the fraction?
Write $\frac{n}{d}$.
- $d \neq 0$. d is a whole number for now.

Dividing Fractions

Step 1: Flip the second fraction.

$$\frac{2}{3} \div \frac{1}{4} \rightarrow \frac{2}{3} \div \frac{4}{1}$$

Step 2: Change the \div to \times $\Rightarrow \frac{2}{3} \times \frac{4}{1}$

Step 3: Multiply the fractions. $\frac{2}{3} \times \frac{4}{1} = \frac{8}{3}$

Step 4: Simplify

1st divide the numerator by the denominator. $3 \overline{)8}$

2nd put the remainder over the denominator. $\frac{2}{3}$

3rd Write the whole number next to the new fraction. $2\frac{2}{3}$

Briefs 1 & 2

High-Leverage Mathematical Content and Instructional Practices

Overview of NYSED Numeracy
Briefs 3 and 4

A hand is holding a geometric toy made of blue and white triangular pieces. The toy is composed of several triangles with cutouts, arranged in a complex pattern. The hand is visible at the bottom left, holding the toy. The background is a plain, light-colored surface.

Brief 3:

High-Leverage Mathematical Content

Supporting Evidence-Based P–12 Mathematics Teaching Practice

What Makes Mathematical Content “High-Leverage?”

High-leverage mathematical content is:

- Inclusive of concepts, procedures, skills, language, and practices.
- Fundamental across the early grades and through high school.
- Foundational to mathematical reasoning and thinking.
- Crucial for accessing and mastering more advanced knowledge and skills in mathematics

The idea of high-leverage mathematical content is **centered on students**, and what they need to learn so that they can use the tools and practices of mathematics and see themselves as capable to do so.

Examples of High-Leverage Content

Base-ten system of
place value and
numeration

Number line

Fractions

Solving equations

Core practices from
the New York State
Next Generation
Mathematics
Learning Standards

Mathematical Knowledge For Teaching (MKT)

Understanding the content that students are learning is **necessary but insufficient** for teachers.

Teachers need to:

- understand the content from students' perspectives;
- be aware of what might make a particular procedure or skill confusing; and
- be able to represent it in ways that make sense to students.

This is important for teaching all students but is particularly **important for advancing equity** in mathematics learning.

What is the
answer?

$$\begin{array}{r} 49 \\ \times 25 \\ \hline \end{array}$$

Understanding the content that students are learning is **necessary but insufficient** for teaching.

What
mathematical
steps led to these
answers?

(a)

$$\begin{array}{r} 49 \\ \times 25 \\ \hline 405 \\ 108 \\ \hline 1485 \end{array}$$

(b)

$$\begin{array}{r} 49 \\ \times 25 \\ \hline 225 \\ 100 \\ \hline 325 \end{array}$$

(c)

$$\begin{array}{r} 49 \\ \times 25 \\ \hline 1250 \\ 25 \\ \hline 1275 \end{array}$$

Brief 4:

High-Leverage Instructional Practices

Supporting Evidence-Based P–12 Mathematics Teaching Practice

What Are “High-Leverage Instructional Practices?”

[TeachingWorks High-Leverage Practices](#)

High-leverage instructional practices are:

- Essential to the work of teaching.
- Key to supporting students' learning and thriving.
- Grounded in research on teaching and learning mathematics.
- Crucial in promoting equity and inclusion in the classroom.

High-leverage instructional practices:

- Support students' mathematics learning and development.
- Help students learn important mathematical content and practices.
- Enable teachers to support students' social and emotional development.

Examples of High-Leverage Instructional Practices

Eliciting and
interpreting
individual
students' thinking

Explaining and
modeling content

Leading a group
discussion

Setting up and
managing small
group work

Establishing and
maintaining
community
expectations

For more information on high-leverage practices, check out the [TeachingWorks website](#).

Which rod is three times a light green?

Lauren: “Three times a light green is blue.”

Lauren: Three times a light green is blue because blue's the same size as when you put three up against each other.

La'rayne: "I think it's three whites."

Briefs 3 and 4

A top-down view of various sandwiches and bagels arranged on a light-colored marble surface. The items include sandwiches made with white bread, sesame seed bagels, and poppy seed bagels, all filled with various meats, cheeses, and vegetables. Some sandwiches are wrapped in twine. An orange banner with white text is overlaid in the center.

Enjoy your lunch!

Mathematics Assessment, Role and Challenges of Using Representations, and Understanding, Using, and Modifying Curriculum Materials

Overview of NYSED Numeracy
Briefs 5, 6 and 7

Brief 5:

Mathematics Assessment of and for Student Learning

Supporting Evidence-Based P–12 Mathematics Teaching Practice

Purposes of Assessments

- **Teacher-led formative assessment:** Checking in up close on how students are making sense of instruction.
- **Self-appraisal:** Supporting students to appraise their own learning.
- **Assessment of mathematical identity:** Learning how students see themselves as mathematical thinkers and knowers, focused on the development of their mathematical identity.
- **Summative assessment:** Documenting what students have learned after completing a specific unit of instruction, what they may need further support with, and what they can extend beyond the scope of what was taught.
- **Standardized assessment:** Using common rigorously developed assessment items that enable analyses at scale.

Examples of Assessments *for* Learning

- **Teacher-led formative assessment:** These include exit tickets, short quizzes, journal writing, tasks matched to what was done in class, or tasks that slightly extend what was done in class.
- **Self-appraisal:** These include exit tickets, questions as part of homework assignments, short surveys.
- **Assessment of mathematical identity:** These include short questionnaires, drawings, journal entry prompts.
- **Task-based assessments:** These include tasks that require students to demonstrate skills in problem-solving, explanation, justification, representation, and/or selection of mathematical tools in order to solve them.

Learning from Formative Assessments

Brief 6:

The Role and Challenges of Using Representations

Supporting Evidence-Based P–12 Mathematics Teaching Practice

Types of Representations

- **Physical:** manipulative materials such as Unifix cubes, base ten blocks, algebra tiles
- **Visual:** diagrams, drawings, graphs
- **Symbolic:** numbers, expressions, equations
- **Verbal:** explanations and discussions
- **Contextual:** real-world situations and problem-based contexts

Using Representations

Preparing for Instruction

- Weigh the strengths and limitations of different representations based on the mathematics they make available.
- Use what you know about your students' previous experiences and the challenges students are likely to encounter.
- Consider task demands as you make decisions about when to adapt tasks and how to implement them with your students and mathematical purposes in mind.

During Instruction

- Encourage sense-making by providing time for students to explore and experiment with representations as they solve problems, offering support when needed.
- Teach students how to use particular manipulatives and set up the language and routines for their productive use.
- Make connections across representations.

Which of these can
be used to
represent $\frac{5}{6} \div \frac{1}{3}$?

1 →

1 →

1/2 →

The background of the slide features a repeating geometric pattern of teal and orange shapes, resembling a woven or quilted texture. The pattern consists of various trapezoidal and triangular shapes interlocking to form a larger, irregular grid-like structure.

Brief 7:

Understanding, Using, and Modifying Curriculum Materials

Supporting Evidence-Based P–12 Mathematics Teaching Practice

Questions to Ask When Analyzing Curricular Materials

- How is **mathematics** represented in the curriculum materials?
- How are **evidence-based practices** represented in the curriculum materials?
- **Who** is represented in the curriculum materials and how are they shown?
- How does the curriculum support a **welcoming and affirming environment**?
- What supports are integrated into materials for **multilingual learners and students with disabilities**?

Considering Curricular Materials

- How are **evidence-based practices** represented in the curriculum materials?
- What supports are integrated into materials for **multilingual learners and students with disabilities**?

1. Write a multiplication equation to represent the area of the shaded piece.

2. How does the diagram represent the equation $\frac{1}{5} \times \frac{1}{3} = \frac{1}{15}$? Explain or show your reasoning.

3. Find the value that makes each equation true. Use a diagram if it is helpful.

a. $\frac{1}{2} \times \frac{1}{6} = ?$

b. $\frac{1}{4} \times \frac{1}{6} = ?$

Activity Synthesis

- Display: $\frac{1}{2} \times \frac{1}{4} = \frac{1}{(2 \times 4)} = \frac{1}{8}$ and the corresponding diagram.
- “How does this equation represent the diagram?” (One fourth of one half is shaded which is the same as 1 piece of the whole square that is divided into 2 columns and 4 rows. So, one eighth of the whole square is shaded.)

MLR1 Stronger and Clearer Each Time

- “Share your explanation about how the last diagram represents $\frac{1}{5} \times \frac{1}{3} = \frac{1}{15}$ with your partner. Take turns being the speaker and the listener. If you are the speaker, share your ideas and writing so far. If you are the listener, ask questions and give feedback to help your partner improve their work.”
- 3–5 minutes: structured partner discussion
- Repeat with 2–3 different partners.
- If needed, display question starters and prompts for feedback.
 - “Can you give an example to help show . . . ?”
 - “Can you use the word _____ in your explanation?”
 - “The part that I understood best was”
- “Revise your initial draft based on the feedback you got from your partners.”
- 2–3 minutes: independent work time.

Briefs 5, 6, and 7

The Role of Leadership

Overview of NYSED Numeracy
Brief 8

Brief 8:

The Role of Leadership

Supporting Evidence-Based P–12 Mathematics Teaching Practice

Leadership Areas

1. Personal Growth and Learning

- Understand effective mathematics teaching and learning
- Understand tensions
- Investigate how communication style and messaging impact teachers' work and support connections

2. Supporting Teacher Learning

- Ensure subject-specific learning opportunities for teachers and leaders
- Ensure curriculum-specific learning opportunities for teachers and leaders
- Provide space and structures for practice-focused reflection and feedback
- Support connections between frameworks and initiatives

3. Building Effective Systems and Structures

- Build systems and schedules that support teacher learning
- Use assessments and assessment data wisely
- Make use of building resources

Local Discussion

Brief 8

Numeracy Leadership Moves
