## Section 1: Introduction and Overview

### 1.1. Introduction

This technical report provides detailed information regarding administration of the New York State Testing Program (NYSTP) Grades 3-8 English Language Arts (ELA) and Mathematics 2021 Operational Tests. This report includes information about test administration, test content and test statistics, validity and reliability, scoring, and scaling.

During the 2020-2021 school year, many students in New York State (NYS) received entirely remote instruction due to the COVID-19 pandemic. Given the U.S. Department of Education's decision not to approve the waiver requested by the New York State Education Department (NYSED) to forego assessments in 2021, it was determined that schools would be required to administer only Session 1 of the Grades 3-8 ELA and Mathematics 2021 Operational Tests to students. Further, only student scores on the Session 1 test questions would contribute to students' total scores for the tests. In addition, NYSED reduced the length of the tests by removing the embedded multiple-choice field test questions, and the tests contained previously administered questions. The decision to use previously administered test questions was based on guidance from nationally recognized experts in the assessment field. Reusing test questions provided the benefit of having established scale scores and stable item parameters.

NYSED also determined that it was not possible to administer the Grades 3-8 ELA and Mathematics tests remotely and that the assessments would be school-based and in-person. As such, students who received entirely remote instruction did not have to come to school only for testing. Moreover, to accommodate the variation in the way instruction was provided to students across the state during the 2020-2021 school year, NYSED provided schools much more flexibility than had been necessary in past years in scheduling the Spring 2021 operational tests. The 2020-21 Elementary- and Intermediate-Level Testing Schedule was amended to reflect that schools were able to use the entire testing window to administer the tests to students, whether the testing was paper-based (PBT) or computer-based (CBT). The ELA testing window was Monday, April 19 to Thursday, April 29 and the mathematics testing window was Monday, May 3 to Friday, May 14 to administer the tests to students, whether administration took place via PBT or CBT.

The following guidance was available to schools for the Spring 2021 administration of these tests as follows:

- Schools were not expected to bring students into the building to participate in the tests if the students were receiving entirely remote instruction during the testing windows. However, to assist in scheduling, NYSED suggested that schools consider contacting parents of students receiving entirely remote instruction to advise them of the testing schedule and ascertain the parent's interest in having their child come to school to participate in the test. Schools that were entirely remote during the entire testing window were not expected to re-open for the sole purpose of administering the tests.
- For students who were unable to participate in the test (Session 1) due to receiving entirely remote instruction during the entire testing window, schools reported this by
marking the field "receiving entirely remote instruction" on the student's answer sheet or in the Nextera computer-based testing (CBT) system.
- Schools were given the option to administer the tests to students over the full duration of the testing window to accommodate instructional schedules.
- Schools were allowed to administer the tests to students who were receiving hybrid instruction on the days that they were ordinarily attending school in person. Schools were not required to test the entire grade on the same school day.
- Public school districts were not required to have a uniform testing schedule for all of the schools in the district.
- Make-up testing at each school for students who were absent on the day of their test were allowed to begin on the school day immediately following the first day of the test administration.
- The operational test did not include any embedded field test questions. As a result, there was one form administered per grade and subject and all questions in Session 1 contributed to student scores.

### 1.2. Test Purpose

The 2021 Grades 3-8 ELA and Mathematics NYSTP was designed to measure student knowledge and skills as defined by grade-level New York State Learning Standards in ELA and Mathematics. The tests were designed to allow the classification of student proficiency into four performance levels (Level I, Level II, Level III, and Level IV). Likewise, the test provided opportunities for students at each of these performance levels to demonstrate their knowledge and skills in the Learning Standards.

### 1.3. Expected Participants

Students in New York State public school Grades 3, 4, 5, 6, 7, and 8 (and ungraded students of equivalent chronological ages) were the expected participants for the Grades 3-8 NYSTP. Religious and independent schools could participate in the testing program, but their participation was not mandatory. Public school students were required to take all State assessments administered at their grade level, except for a very small percentage of students with severe cognitive disabilities who took the New York State Alternate Assessment (NYSAA), and for 2021, students who received exclusively remote instruction during the entire testing window. Schools that were entirely remote during the entire testing window were not expected to re-open for the sole purpose of administering the tests. For more detail on this exemption, please refer to the NYSTP Grades 3-8 English Language Arts and Mathematics Tests School Administrator's Manual (SAM), available online at http://www.nysed.gov/common/nysed/files/programs/state-assessment/ei-sam-21ac.pdf.

### 1.4. Test Use and Decisions Based on Assessment

The NYSTP Grades 3-8 ELA and Mathematics tests are used to measure the extent to which individual students achieve the New York State Learning Standards in ELA and Mathematics, respectively. The results from the 2021 Grades 3-8 ELA and Mathematics Tests were provided to schools and parents for diagnostic purposes only and were to be utilized at the teacher and student level only as a way to help shape students' individualized learning plans to best meet that student's needs. This allowed educators to not only see how individual students were doing but to assess what was working in the classroom - and what wasn't - and make adjustments. Results could also be used to help educators better understand their students' need to provide supports more effectively.

Several types of scores are available from the Grades 3-8 ELA and Mathematics tests, and they are discussed in this section.

### 1.4.1. Scale Scores

The scale scores are a quantification of the proficiency measured by the Grades 3-8 ELA and Mathematics tests at each grade level. Scale scores are comparable only within a given subject and grade. Scale scores are not comparable across grades or across subjects. The scale scores are reported at the individual student level. Detailed information on the derivation and properties of the scale scores, including the range of scale scores for each subject and grade, is provided in Section 5: IRT Analyses.

### 1.4.2. Performance Level Cut Scores and Classification

Student performance is classified as Level I, Level II, Level III, or Level IV for the Grades 3-8 ELA and Mathematics tests. The definitions of performance levels are as follows:

- NYS Level I: Students performing at this level are well below proficient in standards for their grade. They demonstrate limited knowledge, skills, and practices embodied by the New York State P-12 Learning Standards for English Language Arts/Literacy or Mathematics that are considered insufficient for the expectations at this grade.
- NYS Level II: Students performing at this level are below proficient in standards for their grade. They demonstrate knowledge, skills, and practices embodied by the New York State P-12 Learning Standards for English Language Arts/Literacy or Mathematics that are considered partial but insufficient for the expectations at this grade.
- NYS Level III: Students performing at this level are proficient in standards for their grade. They demonstrate knowledge, skills, and practices embodied by the New York State P-12 Learning Standards for English Language Arts/Literacy or Mathematics that are considered sufficient for the expectations at this grade.
- NYS Level IV: Students performing at this level excel in standards for their grade. They demonstrate knowledge, skills, and practices embodied by the New York State P-12 Learning Standards for English Language Arts/Literacy or Mathematics that are considered more than sufficient for the expectations at this grade.

The performance level cut scores used to distinguish between Levels I, II, III, and IV were originally established during the process of standard-setting in summer 2013. In July 2018, Questar hosted a standards review meeting to revisit and update the established cut scores given a test design change and a reduced test length in 2018. The original standard-setting process is described in detail in Section 8 and Appendix P in the 2013 Technical Report (NYSED, 2013). The 2018 Standards Review Report is available in Appendix T of the 2018 Technical Report.

For 2021, the test length was shortened further with only the Session 1 questions of the tests required to contribute to students' total scores. The Session 1-only tests were reviewed, and it was determined that the content remained aligned to the current test blueprints. In addition, since all items were previously administered (either in the Spring 2018 or Spring 2019 Operational Test administrations - see Table 1.1), they had established scale scores and stable item parameters. Therefore, the same cut scores and associated performance levels could be applied to these shortened tests.

Table 1.1. 2021 Grades 3-8 Test Forms Original Administration Dates

| Grade | ELA | Math |
| :---: | :---: | :---: |
| 3 | 2019 | 2018 |
| 4 | 2018 | 2019 |
| 5 | 2019 | 2019 |
| 6 | 2018 | 2018 |
| 7 | 2018 | 2019 |
| 8 | 2019 | 2019 |

### 1.5. Testing Accommodations

In accordance with federal law under the Americans with Disabilities Act and the section Fairness in Testing and Test Use in the Standards for Educational and Psychological Testing (AERA, APA, and NCME, 2014), accommodations that do not alter the measurement of any construct being tested are allowed for test takers. The allowance is in accordance with a student's Individualized Education Program (IEP) or Section 504 Accommodation Plan (504 Plan). School principals are responsible for ensuring that proper accommodations are provided when necessary, and that staff providing accommodations are properly trained. Details on testing accommodations can be found in the aforementioned 2021 School Administrator's Manual (SAM).

### 1.6. Test Transcriptions

For visually impaired students, large-type and Braille editions of the test books are provided. In most cases, the students dictate and/or record their responses, the teachers transcribe student responses to the multiple-choice items onto scannable answer sheets, and the teachers transcribe the responses to the constructed-response items onto the regular test books. Some of the students who use large-type editions will fill in the answer sheets by themselves. The large-type editions are created by Questar Assessment Inc. and printed by SeaChange Print Innovations. SeeWriteHear, LLC, produces the Braille editions. SeeWriteHear employs certified Library of Congress Braille transcribers and delivers Braille in accordance with the Braille Authority of North America (BANA) standards. Camera-ready versions of the regular test books are provided
to the Braille vendor, which then produces the Braille editions. Proofs of the Braille editions are submitted to NYSED for review and approval prior to production.

### 1.7. Test Translations

The NYSTP Grades 3-8 Mathematics tests are translated into eight languages: Arabic, Bengali, Chinese (Simplified), Chinese (Traditional), Haitian-Creole, Korean, Russian, and Spanish. These tests are translated to provide students the opportunity to demonstrate mathematical proficiency independent of their command of the English language. Sample tests are available in each translated language at the following location: https://www.nysedregents.org/ei/translations. html.

English Language Learner (ELL) students taking the Grades 3-8 Mathematics tests may be provided with an oral translation of the test when a written translation is not available in the student's native language. The following testing accommodations are also made available to ELLs: separate testing location, bilingual dictionaries and glossaries, simultaneous use of English and alternative-language editions, oral translation for lower-incidence languages, and writing responses in the native language.

The NYSTP Grades 3-8 ELA tests are not translated into any other language because they are assessments of proficiency in English language arts. The following testing accommodations are made available to ELLs taking the ELA tests: separate testing location and bilingual dictionaries and glossaries.

### 1.8. Test Participation and Results

Due to the circumstances related to the pandemic, approximately four out of ten students participated in the Spring 2021 Grades 3-8 ELA and Mathematics tests. In ELA, 41.9\% of students enrolled in grades 3-8 took the assessment, and in mathematics, $39.9 \%$ of enrolled students took the assessment. Table 1.2 lists the number and percent of students tested statewide across Grades 3-8. Further details on test participation can be found in the press release here: http://www.nysed.gov/news/2021/state-education-department-releases-spring-2021-grades-3-8-ela-and-math-assessment-data.

Table 1.2. Overall Number and Percent of Students Tested \& Not Tested in ELA and Math Statewide Across Grades 3-8

| Category | ELA <br> \# of <br> Students | ELA <br> \% <br> Statewide | Math <br> \# of <br> Students | Math <br> \% <br> Statewide |
| :--- | :---: | :---: | :---: | :---: |
| Total Enrollment | $1,195,169$ |  | $1,195,044$ |  |
| Students Who Took the State Tests | 500,415 | $41.9 \%$ | 476,753 | $39.9 \%$ |
| Students Who Did Not Take the State Tests | 694,754 | $58.1 \%$ | 718,291 | $60.1 \%$ |

In an ordinary year, the percentage of students who participate in the tests is typically over 80 percent. Therefore, the 2021 Grades 3-8 assessment results are not representative of the state's student population and should not be compared to that of previous school years, statewide, or among subgroups of students. As a result, NYSED is not making statewide comparisons of the data, and only district- and school-level results are posted on the Department's website: https://data.nysed.gov/lists.php?type=district.

## Section 2: Test Design and Development

### 2.1. Test Descriptions

The Grades 3-8 ELA and Mathematics tests are criterion-referenced tests composed of multiplechoice (MC) and constructed-response (CR) test items based on the New York State P-12 Learning Standards. For 2021, the tests were composed solely of MC items (Session 1). A second session (Session 2), consisting of predominantly CR items, was made available to schools strictly for their optional administration to students and, if administered, student scores for Session 2 test items were to be used for local student assessment purposes only. The tests were administered in New York State classrooms from April to May of 2021.

### 2.1.1. ELA and Mathematics Tests

For 2021, NYSED made the decision to reuse previously administered operational forms for the Grades 3-8 ELA and Mathematics tests (see Table 1.1). The details of test development are available in Section 2: Test Design and Development of the technical report produced for the year the forms were originally administered. The 2018 Technical Report and 2019 Technical Report are linked on the NYSED Technical Information and Reports Web page here: http://www.nysed.gov/state-assessment/grades-3-8-technical-information-and-reports.

### 2.2. Test Configuration

### 2.2.1. Test Design

The 2021 Grades 3-8 ELA and Mathematics tests were composed solely of MC items (Session 1). A second session (Session 2), consisting of predominantly CR items, was made available to schools strictly for their optional administration to students and, if administered, student scores for Session 2 test items were to be used for local student assessment purposes only.

The tables in Appendix A provide information on the numbers and types of items in each session for the Grades 3-8 ELA and Mathematics tests. NYSED further reduced the length of the Session 1 tests by removing the embedded multiple-choice field test questions.

### 2.3 Proficiency and Performance Standards

In July 2018, a standards review meeting occurred in Albany where New York State educators went through a rigorous process, guided by the best practices indicated by this intensely studied process, to recommend updated performance standards. These recommendations were presented to the Commissioner, who, in turn, adopted the recommended standards set forth by the committees. For additional details on the standards review process, see Appendix T of the 2018 Technical Report.

Each grade level has four performance levels. Three cut points demarcate the performance levels needed to demonstrate each ascending level of performance. Section 6.1 contains the detailed information related to the performance standards (see Table 6.2 and Table 6.3.)

Following NYSED's directive that only Session 1 would be administered to students and the determination regarding which previously administered forms would be used for each content area and grade level, Questar Assessment, Inc’s grade-level leads (senior assessment specialists) assessed each form for blueprint coverage and variety of item formats. Specifically, the grade-
level leads computed the percentage of blueprint coverage in each reporting category if a student were to take only Session 1 of a form. Notes were also made regarding the change in number of points derived from multiple choice and constructed response items if only Session 1 was taken. Based on these reviews, blueprint coverage and point distribution were deemed sufficient for the purposes of the 2021 administration. Therefore, for 2021, the same performance standards were used and applied to the shortened previously administered test forms for ELA and Mathematics.

## Section 3: Validity

This section presents the evidence gathered to support the intended uses and interpretations of scores for the NYSTP Grades 3-8 English Language Arts (ELA) and Mathematics tests. All the test forms in the 2021 administration were previously administered in either the Spring 2018 or Spring 2019 Operational Test administrations. Table 1.1 lists the forms and their original year of use. Reusing test questions provided the benefit of having established scale scores and stable item parameters. All tests are considered pre-equated. Results for validity evidence (i.e., content validity, unidimensionality, and detection of bias) are available in Section 3: Validity of the original-year technical reports which can be found here: http://www.nysed.gov/state-assessment/grades-3-8-technical-information-and-reports.

In addition, schools were required to administer only Session 1 of the Grades 3-8 ELA and Mathematics tests to students, and only student scores on the Session 1 test questions contributed to students' total scores for the tests. Test reliability analysis on Session 1-only test questions included all tested New York State students who received valid scores from the Spring 2018 and Spring 2019 Operational Tests when the test forms were originally administered.

### 3.1. Construct (Internal Structure) Validity

Construct validity (i.e., what scores mean and what kind of inferences they support) is often considered the most important type of test validity. Empirical studies of the internal structure of the test provide one type of evidence of construct validity. For example, high internal consistency constitutes evidence of validity. This is because high coefficients imply that the test items are measuring the same domain of skill and are reliable and consistent.

Reliability coefficients for the 2021 ELA and Mathematics Tests were calculated for the shortened, previously administered Session 1 only questions using total populations and subgroups of students who received valid scores from the Spring 2018 or Spring 2019 Operational Tests, when the test forms were originally administered. The results are presented in Section 7.1: Test Reliability. For the total population, the ELA reliability coefficients (Cronbach's alpha) ranged from 0.77 to 0.86 on the Session 1 questions only. For all subgroups, the reliability coefficients were greater than or equal to 0.51 . For the total population, the Mathematics reliability coefficients (Cronbach's alpha) ranged from 0.84 to 0.89 on the Session 1 questions only. For all subgroups, the reliability coefficients were greater than or equal to 0.64 . Overall, high internal consistency of the NYSTP Grades 3-8 ELA and Mathematics Session 1 tests provided sound evidence of construct validity.

## Section 4: Test Administration and Scoring

This section provides summaries of New York State test administration and scoring procedures. For further information, refer to the aforementioned School Administrator's Manual and the New York State Scoring Leader Handbook (2021) located here: http://www.nysed.gov/common /nysed/files/programs/state-assessment/3-8-scoring-leader-handbook-2021.pdf

### 4.1. Test Administration

The NYSTP Grades 3-8 ELA and Mathematics Tests were administered to students in a paperbased (PBT) and computer-based (CBT) testing mode in 2021. The 2020-21 Elementary- and Intermediate-Level Testing Schedule was amended to reflect that schools were able to use the entire testing window to administer the tests to students, whether the testing was paper-based or computer-based. The ELA testing window was Monday, April 19 to Thursday, April 29 for ELA and the Mathematics testing window was Monday, May 3 to Friday, May 14. Schools were given the option to administer the tests to students over the full duration of the testing window to accommodate instructional schedules.

## Section 5: Operational Test Data Collection and Classical Analysis

Summaries of NYSTP Grades 3-8 ELA and Mathematics operational tests data collection, classical data analysis and DIF analyses for the 2021 Grades 3-8 ELA and Mathematics Session 1 tests are available in Section 5: Operational Test Data Collection and Classical Analysis of the technical report produced for the year the forms were originally administered. The 2018 Technical Report and 2019 Technical Report are linked on the NYSED Technical Information and Reports Web page found here: http://www.nysed.gov/state-assessment/grades-3-8-technical-information-and-reports.

## Section 6: IRT Analyses

This section summarizes Item Response Theory (IRT) analyses for NYSTP Grades 3-8 ELA and Mathematics operational tests used in the scoring procedure to determine a student's total scores for the tests. All the Spring 2021 test forms were previously administered in either 2018 or 2019 (see Table 1.1.), and IRT calibration and post-equating were performed after the test forms’ original administrations. The results of the IRT analyses in detail (i.e., calibration, post-equating and scaling processes) are available in Section 6 of the original-year technical reports found here: http://www.nysed.gov/state-assessment/grades-3-8-technical-information-and-reports. All tests in 2021 are considered pre-equated. The raw-score-to-scale-score conversion tables for the 2021 administration were developed using the item parameters of the Session 1 questions previously established in 2018 and 2019. For detailed procedures, see the following sections.

### 6.1. Pre-Equating

During the 2021 operational test administration, because all the test forms were previously administered in 2018 or 2019, pre-equating was conducted prior to administration of the tests. Based on the sample invariant property of IRT, all the item parameter estimates were obtained from large, representative samples, and placed on the reference scale in their previous administrations through the post-equating procedure described in the original-year technical reports. Item parameters derived in such a manner can be used to create raw-score-to-scale-score conversion tables prior to test administration. Neither calibration nor scaling was implemented in the pre-equating process.

The scale score is the basic score for the NYSTP. Raw-score-to-scale-score (RSSS) conversion tables based on the total number correct are presented in Appendix C, Table C.1-C.12. The raw-score-to-scale-score conversion tables for the 2021 administration were established using the inverse test characteristic curve (TCC) approach, where each student receives a theta score estimate corresponding to their raw score. For raw scores below the chance level or the perfect score, the following adjustment and interpolation was conducted to derive the adjusted theta scores: At the lower end of the scale, for any theta estimates that were lower than $-2.5,0.25$ was subtracted from the preceding adjusted theta value that was within the range. At the higher end of the scale, for any theta estimates that were higher than $3.0,0.25$ was added to the previous theta value that was within the range. Then the scaling constants $M_{1}^{S}$ and $M_{2}^{S}$ (Table 6.1) were applied to derive the scale score of each student from their theta score estimate as follows:

$$
\text { ScaleScore }=\left(M_{1}^{S} \cdot \theta\right)+M_{2}^{S}
$$

## Table 6.1. Operational Scaling Coefficients

| Grade | Slope ( $\left.\boldsymbol{M}_{\mathbf{1}}^{\boldsymbol{S}}\right)$ | Intercept $\left(\boldsymbol{M}_{\mathbf{2}}^{\boldsymbol{S}} \mathbf{)}\right.$ |
| :---: | :---: | :---: |
| ELA |  |  |
| 3 | 18.310914 | 600.340994 |
| 4 | 18.276716 | 600.101132 |
| 5 | 18.212931 | 600.127742 |
| 6 | 18.309278 | 600.006654 |
| 7 | 18.318571 | 600.223246 |

| 8 | 18.308395 | 600.129092 |
| :--- | :---: | :---: |
| Mathematics |  |  |
| 3 | 18.635919 | 600.082128 |
| 4 | 18.485491 | 600.009369 |
| 5 | 18.404109 | 600.040856 |
| 6 | 18.191784 | 600.432302 |
| 7 | 18.559827 | 600.499091 |
| 8 | 18.115200 | 600.640639 |

The conditional standard error of measurement (CSEM) of a scale score indicates the precision with which the proficiency, $\theta$, is estimated, and it is inversely related to the amount of information provided by the test at a given proficiency level. The CSEM of a scale score is estimated as follows:

$$
\operatorname{CSEM}(S S)=M_{1}^{S} \cdot \frac{1}{\sqrt{I(\hat{\theta})}}
$$

where $\hat{\theta}$ is the proficiency level corresponding to scale score, $S S, I(\hat{\theta})$ is the amount of information provided by the test at $\hat{\theta}$, and $M_{1}^{S}$ is the scaling constant defined in Table 6.1. The CSEM value varies across proficiency levels and is the highest at the extreme ends of the scale where the amount of test information is typically the lowest.

The final element of the raw-score-to-scale-score tables is the application of the performance level cut scores. Scale score cuts were set in the summer of 2018 through standard review and were applied to the scale scores for the tests in the following years through the equating procedures. In 2021 raw-score-to-scale-score tables were calculated using the IRT parameters on the reference scale; therefore, they were put on the same scale as the original test. Also, content coverage review revealed that, based on session 1 only, blueprint coverage and point distribution were deemed sufficient across reporting categories for the purposes of the 2021 administration. Therefore, the cut scores of each performance level remain the same as those based on the original test. See Table 6.2 and Table 6.3 for the scale score ranges for each performance level.

Table 6.2 and Table 6.3 present scale score ranges associated with each performance level for ELA and Mathematics, respectively.

Table 6.2. ELA Scale Score Ranges Associated with Each Performance Level

| Grade | NYS Level 1 | NYS Level 2 | NYS Level 3 | NYS Level 4 |
| :---: | :---: | :---: | :---: | :---: |
| 3 | $542-582$ | $583-601$ | $602-628$ | $629-642$ |
| 4 | $542-583$ | $584-602$ | $603-618$ | $619-655$ |
| 5 | $523-593$ | $594-608$ | $609-621$ | $622-656$ |
| 6 | $523-589$ | $590-601$ | $602-613$ | $614-652$ |
| 7 | $523-590$ | $591-606$ | $607-622$ | $623-650$ |
| 8 | $523-583$ | $584-602$ | $603-616$ | $617-647$ |

Table 6.3. Mathematics Scale Score Ranges Associated with Each Performance Level

| Grade | NYS Level 1 | NYS Level 2 | NYS Level 3 | NYS Level 4 |
| :---: | :---: | :---: | :---: | :---: |
| 3 | $541-586$ | $587-599$ | $600-614$ | $615-637$ |
| 4 | $536-587$ | $588-601$ | $602-613$ | $614-634$ |
| 5 | $541-591$ | $592-603$ | $604-615$ | $616-634$ |
| 6 | $546-591$ | $592-603$ | $604-615$ | $616-636$ |
| 7 | $529-592$ | $593-605$ | $606-617$ | $618-637$ |
| 8 | $544-595$ | $596-609$ | $610-621$ | $622-641$ |

A mode comparability study was completed to identify whether or not there were any differences in student performance that could be attributed to the mode of test administration (i.e. PBT versus CBT). The main inference to be drawn from the mode comparability study is whether scores that arise from students testing on paper or on computer are interchangeable. A propensity score matching approach was conducted to generate the PBT and CBT samples that were comparable on covariates that may affect student performance, aside from the test mode itself (e.g., gender, school-type, previous performance) for the 2018 and 2019 administrations when the test forms were originally administered. This process included the entire test (Sessions 1 and 2). For the 2021 mode comparability study, the same matched samples were used to evaluate the difference in students' test scores using only the Session 1 test questions. The difference in students' test scores were computed between the matched PBT and CBT samples to evaluate test-level mode comparability, and mode adjustments were made accordingly. Please see Appendix D (the mode comparability study summary) and Appendix E (the NYSED memorandum on the mode comparability results) for more details.

## Section 7: Reliability and Standard Error of Measurement

This section presents specific information on various test reliability statistics and standard error of measurement (SEM), as well as the results from a study of performance level classification accuracy and consistency. All the test forms in the 2021 administration were previously administered in either the Spring 2018 or Spring 2019 Operational Test administrations. Table 1.1 lists the forms and their original year of use. In addition, schools were required to administer only Session 1 of the Grades 3-8 ELA and Mathematics tests to students, and only student scores on the Session 1 test questions contributed to students’ total scores for the tests. Test reliability analysis on the Session 1-only questions included all tested New York State students who received valid scores from the Spring 2018 or Spring 2019 Operational Tests when the test forms were originally administered.

### 7.1. Test Reliability

Test reliability is directly related to score stability and standard error and, as such, is an essential element of fairness and validity. Test reliability can be directly measured with an alpha statistic, or the alpha statistic can be used to derive the SEM. For the Grades 3-8 ELA and Mathematics tests, Questar calculated two types of reliability statistics: Cronbach's alpha (Cronbach, 1951) and Feldt-Raju coefficient (Qualls, 1995). These two measures are appropriate for assessment of a test's internal consistency when a single test is administered to a group of examinees on one occasion. The reliability of the test is then estimated by considering how well the items that reflect the same construct yield similar results (or how consistent the results are for different items that reflect the same construct measured by the test). Both Cronbach's alpha and FeldtRaju coefficient measures are appropriate for tests of multiple-item formats (MC and CR items). In 2021, only Session 1 questions counted towards student scores. To determine if the Session 1only tests were reliable, reliability coefficients were calculated for the shortened test. These reliability coefficients were calculated using Session 1 data from the original administration, either 2018 or 2019 (see Table 7.2 and Table 7.4). The reliability coefficients for the entire testing population and subgroups from 2018 or 2019 are presented for Session 1, only.

### 7.1.1. Test Statistics and Reliability for Total Test

Table 7.1 and Table 7.3 present the Session 1 test statistics including raw-score (RS) means and raw-score standard deviations (SDs) for ELA and Mathematics, respectively. These statistics give the necessary context for Table 7.2 and Table 7.4, which present the case counts ( N -Count), number of test items (\# Items), Cronbach’s alpha and associated SEM, and Feldt-Raju coefficient and associated SEM obtained for the total ELA and Mathematics tests. Reliability coefficients provide measures of internal consistency that range from zero to one. High reliability indicates that scores are consistent and not unduly influenced by random error. Overall test reliability is a very good indication of each test's internal consistency.

Grades 3-8 ELA reliability estimates (Cronbach's alpha and Feldt-Raju) ranged from 0.77 to 0.86. Grades 3-8 Mathematics reliability estimates (Cronbach's alpha and Feldt-Raju) ranged from 0.84 to 0.89 . The reliabilities are similar across grades and slightly higher for the Mathematics tests than for the ELA tests. All reliabilities were at least 0.77 across all grades and both subjects, which is a good indication that the NYSTP 2021 Grades 3-8 ELA and Mathematics tests are acceptably reliable.

Table 7.1. ELA Test Form Statistics*

|  | Item-Level |  |  | Student-Level |  |  |  |  |

### 7.1.2. Test Reliability for Subgroups

The reporting subgroups include the following: gender, ethnicity, NRC, ELL/MLL, all SWD, all SUA, SWD/SUA (includes examinees who are classified as having a disability and who use at least one disability-related accommodation), and ELL/MLLs using accommodations specific to their ELL/MLL status (ELL/MLL/SUA). Accommodations available to students include the following: Flexibility in Scheduling/Timing, Flexibility in Setting, Method of Presentation (excluding Braille), Method of Response, Braille and Large-type, and others. Accommodations available to ELL/MLLs are Separate Location, and Bilingual Dictionaries and Glossaries.

As shown in Tables 7.5-7.10 and Tables 7.11-7.16 for ELA and Mathematics, respectively, the estimated reliabilities for most subgroups were close in magnitude to the test reliability estimates of the population tested in either 2018 or 2019. Cronbach's alpha reliability coefficients were all at least 0.51 . Feldt-Raju reliability coefficients, which tend to be slightly larger than the Cronbach's alpha estimates for the same group, were at least 0.52 .

Table 7.5. ELA Grade 3 Test Reliability by Subgroup*

| Demographic Category |  | N-Count | Cronbach's Alpha |  | Feldt-Raju Coefficient |  |

### 7.2. Standard Error of Measurement (SEM)

Table 7.2 and Table 7.4 present the SEMs, as computed from Cronbach's alpha and the FeldtRaju reliability statistics, for Session 1 of the ELA and Mathematics tests, respectively. The SEMs ranged from 1.73 to 2.33 across subjects, grades, and the two methods of estimation, which is reasonable and small. The SEMs are directly related to reliability; the higher the reliability, the lower the standard error. As discussed, the reliability of these tests is relatively high, so it was expected that the SEMs would be low.

The SEMs for the subpopulations, as computed from Cronbach's alpha and the Feldt-Raju reliability statistics, are presented in Tables 7.5-7.10 and Tables 7.11-7.16. The SEMs associated with all reliability estimates for all subjects, grades, methods of estimation, and subpopulations ranged from 1.53 to 2.44 , which is acceptably close to those for the entire population. This narrow range indicates that for Session 1 only of the Grades 3-8 ELA and Mathematics tests, all students' test scores were reasonably reliable with minimal error.

### 7.3. Performance Level Classification Consistency and Accuracy

This subsection describes the analyses conducted to estimate performance level classification consistency and accuracy for the Grades 3-8 ELA and Mathematics tests, based on Session 1 test questions, only. Performance level classification consistency and accuracy were calculated using Session 1 data from the original administration, either 2018 or 2019 (see Tables 7.17-7.19.) This provides statistical information on the classification of students into the four performance categories. Classification consistency refers to the estimated degree of agreement between examinees’ performance classification from two independent administrations of the same test (or from two parallel forms of the test). Because obtaining test scores from two independent administrations of New York State tests was not feasible due to item release after each administration, a psychometric model was used to obtain the estimated classification consistency indices, using test scores from a single administration. Classification accuracy can be defined as the agreement between the actual classifications using observed cut scores and true classifications based on known true cut scores (Livingston and Lewis, 1995).

In conjunction with measures of internal consistency, classification consistency is an important type of reliability and is particularly relevant to high-stakes tests. As a form of reliability, classification consistency represents how reliably students can be classified into performance categories.

Classification consistency is most relevant for students whose performance is near the proficiency cut score. For example, consider the cut score delineating Levels II and III, or simply the "Level III Cut." Students whose proficiency is far above or far below that cut score are unlikely to be misclassified because repeated administration of the test will nearly always result in the same classification. Examinees whose true scores are close to the cut score are a more serious concern. These students' true scores will likely lie within the SEM of the cut score. For this reason, the measurement error at the cut scores should be considered when evaluating the classification consistency of a test. Furthermore, the number of students near the cut scores should also be considered when evaluating classification consistency; these numbers show the number of students who are at risk of being misclassified. Classification consistency and accuracy were estimated using the IRT procedure suggested by Lee, Hanson, and Brennan (2002) and Wang, Kolen, and Harris (2000). Appendix P in the original-year technical reports includes a description of the calculations and procedure based on the paper by Lee et al. (2002).

### 7.3.1. Consistency

The results for classifying students into four performance levels are separated from the results based solely on the Level III cut. Table 6.17 and Table 6.18 include case counts ( N -Count), classification consistency (Agreement), classification inconsistency (Inconsistency), and Cohen's kappa (Карра). Consistency indicates the rate at which a second administration would yield the same performance category designation (or a different designation for the inconsistency rate). The agreement index is a sum of the diagonal element in the contingency table. Kappa is similar but corrects for chance agreement. The inconsistency index is equal to the " 1 - agreement index."

Table 7.17 depicts the ELA and Mathematics consistency study results, based on the range of performance levels for all grades. For ELA, 52-61\% of students were estimated to be classified consistently to one of the four performance categories with a hypothetical second administration.

Kappa-that corrects for chance agreement—ranged from 0.34 to 0.46 . These are between "fair" and "moderate" agreement, as per Landis and Koch’s (1977) rules of thumb for kappa. For Mathematics, $61-67 \%$ of students were estimated to be classified consistently to one of the four performance categories, and kappa ranged from 0.47 to 0.56 . These are considered "moderate" agreement, by Landis and Koch’s (1977) rules of thumb for the kappa statistic. As mentioned above and for all tests, there is an acceptable amount of measurement error that all scores contain. By random chance, students testing twice may be classified first, for example, as a Level III and second as a Level IV. This is expected to occur more often for students scoring around the selected cut score, and less often for students closer to the middle of the performance level (i.e., close to the mid-point of two adjacent cut scores).

Table 7.17. Decision Consistency (All Cuts)*

| Grade | N-Count | Agreement | Inconsistency | Kappa |
| :---: | :---: | :---: | :---: | :---: |
| ELA |  |  |  |  |
| 3 | 177,503 | $59 \%$ | $41 \%$ | 0.40 |
| 4 | 181,672 | $52 \%$ | $48 \%$ | 0.34 |
| 5 | 175,383 | $61 \%$ | $39 \%$ | 0.46 |
| 6 | 170,015 | $58 \%$ | $42 \%$ | 0.44 |
| 7 | 155,919 | $58 \%$ | $42 \%$ | 0.43 |
| 8 | 151,966 | $60 \%$ | $40 \%$ | 0.46 |
| Mathematics |  |  |  |  |
| 3 | 176,663 | $61 \%$ | $39 \%$ | 0.47 |
| 4 | 182,333 | $65 \%$ | $35 \%$ | 0.53 |
| 5 | 170,958 | $65 \%$ | $35 \%$ | 0.53 |
| 6 | 164,429 | $67 \%$ | $33 \%$ | 0.56 |
| 7 | 159,915 | $66 \%$ | $34 \%$ | 0.54 |
| 8 | 107,089 | $64 \%$ | $36 \%$ | 0.51 |

*Note. Based on Session 1 test questions from the original administration test data.
Decision consistency was calculated for PBT students only as item parameters were disproportionally based on PBT.
Table 7.18 depicts the ELA and Mathematics consistency study results based on two performance levels (NYS Level II and NYS Level III) as defined by the Level III cut. For ELA, $78-84 \%$ of the classifications of individual students were estimated to remain stable with a second administration. Kappa coefficients for ELA classification consistency ranged from 0.56 to 0.67. These are between "moderate" and "substantial" agreement, as per Landis and Koch's (1977) rules of thumb for kappa. For Mathematics, 85-90\% of the classifications were estimated consistently, and kappa coefficients ranged from 0.68 to 0.79 . These statistics indicate at least "substantial" agreement (where kappa > 0.60), as per Landis and Koch's (1977) rules of thumb for kappa.

Table 7.18. Decision Consistency (Level III Cut)*

| Grade | N-Count | Agreement | Inconsistency | Kappa |
| :---: | :---: | :---: | :---: | :---: |
| ELA |  |  |  |  |
| 3 | 177,503 | $81 \%$ | $19 \%$ | 0.60 |
| 4 | 181,672 | $78 \%$ | $22 \%$ | 0.56 |
| 5 | 175,383 | $84 \%$ | $16 \%$ | 0.66 |
| 6 | 170,015 | $83 \%$ | $17 \%$ | 0.66 |
| 7 | 155,919 | $83 \%$ | $17 \%$ | 0.65 |
| 8 | 151,966 | $83 \%$ | $17 \%$ | 0.67 |
| Mathematics |  |  |  |  |
| 3 | 176,663 | $85 \%$ | $15 \%$ | 0.68 |
| 4 | 182,333 | $87 \%$ | $13 \%$ | 0.75 |
| 5 | 170,958 | $87 \%$ | $13 \%$ | 0.73 |
| 6 | 164,429 | $88 \%$ | $12 \%$ | 0.77 |
| 7 | 159,915 | $90 \%$ | $10 \%$ | 0.79 |
| 8 | 107,089 | $90 \%$ | $10 \%$ | 0.77 |

*Note. Based on Session 1 test questions from the original administration test data.
Decision consistency was calculated for PBT students only as item parameters were disproportionally based on PBT.

### 7.3.2. Accuracy

Table 7.19 presents the results of classification accuracy for the Session 1 only ELA and Mathematics tests across all grades. Included in the table are case counts (N-Count) and classification accuracy (Accuracy) for all performance levels (All Cuts) and for the Level III cut score. By definition, accuracy associated with the Level III cut is at least as great as that with the entire set of cut scores because there are only two categories for the former, as opposed to the latter, which has four.

For ELA, the estimated accuracy rates indicate that the categorization of a student's observed performance is in agreement with the location of his or her underlying proficiency from $60 \%$ to $70 \%$ of the time across all performance levels and $84 \%$ to $88 \%$ of the time in regard to the Level III cut score. For mathematics, the estimated accuracy rates indicate that the categorization of a student's observed performance is in agreement with the location of his or her true proficiency from $66 \%$ to $75 \%$ of the time across all performance levels and $86 \%$ to $93 \%$ of the time in regard to the Level III cut score.

Table 7.19. Decision Agreement (Accuracy) Estimates*

|  |  | Accuracy |
| :---: | :---: | :---: |
| Grade | N -Count | All Cuts Level III Cut |

| ELA |  |  |  |
| :--- | :---: | :---: | :--- |
| 3 | 177,503 | $67 \%$ | $85 \%$ |
| 4 | 181,672 | $60 \%$ | $84 \%$ |
| 5 | 175,383 | $70 \%$ | $88 \%$ |
| 6 | 170,015 | $67 \%$ | $88 \%$ |
| 7 | 155,919 | $65 \%$ | $86 \%$ |
| 8 | 151,966 | $67 \%$ | $86 \%$ |
| Mathematics |  |  |  |
| 3 | 176,663 | $66 \%$ | $86 \%$ |
| 4 | 182,333 | $74 \%$ | $91 \%$ |
| 5 | 170,958 | $72 \%$ | $90 \%$ |
| 6 | 164,429 | $75 \%$ | $91 \%$ |
| 7 | 159,915 | $75 \%$ | $93 \%$ |
| 8 | 107,089 | $72 \%$ | $93 \%$ |

*Note. Based on Session 1 test questions from the original administration test data.
Decision agreement was calculated for PBT students only as item parameters were disproportionally based on PBT.

## Appendix A: ELA and Mathematics Test Configurations

The 2021 Grades 3-8 ELA and Mathematics tests were composed of one session (Session 1) that included MC items. A second session (Session 2), consisting of predominantly CR items, was made available to schools strictly for their optional administration to students and, if administered, student scores for Session 2 test items were to be used for local student assessment purposes only. In addition, the 2021 Tests were reduced in length by the removal of the embedded multiple-choice field test questions. The tables included in Appendix A refer to the test configuration when the operational test forms were previously administered for the 2018 and 2019 Tests, with the embedded field test items removed.

Table A.1. ELA Test Configuration

| Grade | Day | Session | Number of Items |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Multiple-Choice | Constructed-Response | Total |
|  |  |  | Operational | Operational |  |
| 3 | 1 | 1 | 18 | 0 | 18 |

## Appendix B: Operational Item Maps

The following tables show the operational item maps for the 2021 NYSTP Grades 3-8 ELA and Mathematics tests. All the test forms in the Spring 2021 operational tests were previously used in the Spring 2018 and Spring 2019 operational administrations. In addition, only Session 1 of the ELA and Mathematics Tests were required. Session 2 was made available to schools strictly for their optional administration to students and, if administered, student scores for Session 2 test questions were to be used for local student assessment purposes only. Only student scores on the Session 1 test questions contributed to students' total test scores. Additional detail on the standards to which these items align may be found at: http://www.engageny.org/resource/new-york-state-p-12-common-core-learningstandards.

*This item map is intended to identify the primary analytic skills necessary to successfully answer each question. However, each constructed-response question measures proficiencies described in multiple standards, including writing and additional reading and language standards. For example, two-point and four-point constructed-response questions require students to first conduct the analyses described in the mapped standard and then produce written responses that are rated based on writing standards. To gain greater insight into the measurement focus for constructed-response questions, please refer to the rubrics shown in the Educator Guides.

Table B.2. ELA Grade 4 Operational Item Map

| Question | Type | Points | Standard | Strand | Subscore |  |

| Session 2 |  |  |  |  |  |
| 19 | Constructed Response | 2 | CCSS.ELA-Literacy.RL.4.4 | Reading Standards for Literature | Writing to Sources |
| 20 | Constructed Response | 2 | CCSS.ELA-Literacy.RL.4.2 | Reading Standards for Literature | Writing to Sources |
| 21 | Constructed Response | 2 | CCSS.ELA-Literacy.RL.4.6 | Reading Standards for Literature | Writing to Sources |
| 22 | Constructed Response | 2 | CCSS.ELA-Literacy.RI.4.3 | Reading Standards for Informational Text | Writing to Sources |
| 23 | Constructed Response | 2 | CCSS.ELA-Literacy.R.4.2 | Reading Standards for Informational Text | Writing to Sources |
| 24 | Constructed Response | 2 | CCSS.ELA-Literacy.RI.4.3 | Reading Standards for Informational Text | Writing to Sources |
| 25 | Constructed Response | 4 | CCSS.ELA-Literacy.RI.4.3 | Reading Standards for Informational Text | Writing to Sources |

*This item map is intended to identify the primary analytic skills necessary to successfully answer each question. However, each constructed-response question measures proficiencies described in multiple standards, including writing and additional reading and language standards. For example, two point and four point constructed-response questions require students to first conduct the analyses described in the mapped standard and then produce written responses that are rated based on writing standards. To gain greater insight into the measurement focus for constructed-response questions please refer to the rubrics shown in the Educator Guides.

Table B.3. ELA Grade 5 Operational Item Map

| Question | Type | Points | Standard | Strand | Subscore |

## Appendix D: Study of Operational Test Mode Comparability

## Section D.1. Introduction

Being mindful of the variability in the manner in which instruction was being provided to students across the State in response to COVID-19, NYSED decided to administer the preexisting test forms from one of the last two administrations (either 2018 or 2019) for the 2021 administration of Grades 3-8 ELA and Mathematics Tests. Schools were only required to administer Session 1 of the ELA and Mathematics Tests to students, and Session 1 tests were reduced in length by the removal of the embedded multiple-choice test questions.

A new raw-score-to-scale-score (RSSS) table for each grade/subject was generated for the shortened test based on Session 1 items using the inverse-TCC method with the most recent banked item IRT parameters. Tables D. 1 and D. 2 summarize the number of items by item type for each session for the ELA and Math test forms.

Table D.1. Summary of Item Type by Session on 2021 Grades 3-8 ELA Test Forms

| Subject | Grade | Session | Strand | \# Items |  |  | Raw Score Points |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | MC | CR2 | CR4 |  |
| ELA | 3 | 1 | Reading | 18 | 0 | 0 | 18 |

|  | 3 | 1 | Moints |  |  |  |  |$]$

| Subject | Grade | Session | Calculator | \# Items |  |  | Raw Score |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | MC | CR2 | CR3 | Points |
| Math | 7 | 1 | Yes | 26 | 0 | 0 | 26 |
|  |  | 2 | Yes | 7 | 7 | 1 | 24 |
|  | 8 | 1 | Yes | 26 | 0 | 0 | 26 |
|  |  | 2 | Yes | 7 | 7 | 1 | 24 |

In the 2021 administration of Grades 3-8 ELA and Mathematics Tests, NYSED continued to offer its operational test in a computer-based testing (CBT) environment for the Grades 3-8 ELA and Mathematics tests. The schools have the option to administer the tests via paper-based testing (PBT) or computer-based testing (CBT). Because of the test structure change, the adjustment on the CBT mode RSSS tables needs to be reevaluated. In response to COVID-19, NYSED provided schools much more flexibility than had been necessary in past years in the local in-school scheduling and administration of the Spring 2021 ELA and Mathematics Tests. Given these unique circumstances, schools were not expected to bring students into the building to participate in the tests if the students were receiving entirely remote instruction during the testing windows. As a result, the population of students testing in 2021 was not representative of the student population overall. Therefore, the matched samples in the mode comparability studies conducted in the 2018 and 2019 administrations were used to check whether there is a difference in performance between the test modes based on Session 1 performance.

## Section D.2. Method

This section outlines the steps needed for reevaluating the CBT mode adjustment in this mode comparability study.

1) Determine the samples used to reevaluate the adjustment of the student scores on the CBT test mode. A propensity score matching approach has been implemented in the 2018 and 2019 administrations of Grades 3-8 ELA and Mathematics Tests to generate the CBT and PBT samples that were comparable on selected covariates that may affect student performance, aside from the test mode itself. The covariate balance between the CBT and PBT samples was evaluated after propensity score matching, which showed well-matched PBT and CBT groups were achieved. (Please see the "Comparability of Spring 2018 Grades 3-8 English Language Arts and Mathematics Paper-based and Computer-based Tests" or the "Comparability of Spring 2019 Grades 3-8 English Language Arts and Mathematics Paper-based and Computer-based Tests" for more information.) These matched samples were used to evaluate test-level mode comparability in the 2018 and 2019 administrations. Therefore, the same matched samples can be used to evaluate test-level mode comparability based on Session 1 item responses. For each subject and grade level, the samples used for this study were from the corresponding year when the test forms were originally administered.
2) The distributions of raw scores on Session 1 for the matched PBT and CBT samples are first reviewed. This enables a direct means of detecting possible mode effects on Session 1 of the test.
3) Next, the distributions of scale scores for the matched PBT and CBT samples are reviewed. The scale scores are derived using the new operational raw-score-to-scalescore (RSSS) tables which are generated based on Session 1 items. The mode treatment effect is calculated as the difference in scale score means for the matched PBT and CBT samples.
4) Calculate the difference on the selected scores for the matched samples. CBT can be considered the "treatment" and PBT can be considered the "control" condition. Both difference ( $\boldsymbol{\Delta}$ ) and standardized difference ( $d$ ) between CBT $(t)$ and PBT ( $c$ ) for both before ( $b$ ) and after matching $(m)$ are calculated as below:

$$
\begin{gather*}
\Delta b k=\bar{x}_{t k}-\bar{x}_{c k}  \tag{1}\\
d_{b k}=\left(\bar{x}_{t k}-\bar{x}_{c k}\right) / \sqrt{\left(s_{t k}^{2}+s_{c k}^{2}\right) / 2}  \tag{2}\\
\Delta_{m k}=\bar{x}_{t m k}-\bar{x}_{c m k}  \tag{3}\\
d_{m k}=\left(\bar{x}_{t m k}-\bar{x}_{c m k}\right) / \sqrt{\left(s_{t k}^{2}+s_{c k}^{2}\right) / 2} \tag{4}
\end{gather*}
$$

## Section D.3. Results

Questar calculated the sample means for each matched sample and their standardized differences before and after matching for the following variables:

- 2017 or 2018 Scale Score (SS): the prior year (grade $n-1$ ) scale score, which was the proxy for prior ability that was entered as a key predictor into the propensity score matching model;
- 2018 or 2019 Raw Score (RS): the current year operational raw score for the original test;
- 2018 or 2019 Scale Score (SS): the current year scale score for the original test;
- 2018 or 2019 Raw Score on Session 1 (Session 1 RS): the current year operational raw score on Session 1;
- 2018 or 2019 Scale Score based on Session 1 (Session 1 SS): the current year scale score based on Session 1 RSSS table.

The test-level performance before and after matching is summarized in Tables D.3-D.6. The results for CBT scale score adjustment after matching comparison between the original test (Session $1+2$ ) and Session 1 only are summarized in Table D.7.

## Section D.4. Discussion and Conclusions

## D.4.1. Discussion

Based on the analyses described above, NYSED - in consultation with New York State's Assessment TAC and Questar - decided to apply an additive adjustment to CBT students’ scale scores because it best balanced concerns about fairness, interpretability and face validity. NYSED also chose to set a ceiling above which the CBT students' scale scores would not be adjusted - namely the maximum observed scale score available to PBT students. In other words, the highest scale score on CBT was constrained to be equal to the highest scale score for PBT students.

The differences in the scale score means between the matched samples using the new RSSS tables based on Session 1 were computed. The differences were rounded to the nearest whole numbers, which were used as the uniform additive adjustment applied to the CBT students within each test.

For Grade 3 students, who do not have prior year scores, there was no propensity score matched samples being generated. Alternatively, the average of mode adjustments of Grades 4 and 5 was computed and used as the adjustment for Grade 3 CBT students. The CBT adjustments in all grade/subject were summarized in Table D.7.

Table D.7. CBT Scale Score Adjustments Comparison after Matching

| Subject | Grade | Session | PBT |  |  | CBT |  |  | $\Delta$ | d | CBT Adjustment |  |

Note. The standardized difference (d) with an absolute value greater than 0.05 after matching was bolded.

## D.4.2. Conclusions

Following the previous administrations, two administration modes were offered in the Grades 38 ELA and Mathematics tests in Spring 2021. The decision to offer PBT vs. CBT was optional, and the population of students who tested via CBT were not assumed equivalent to the population of students who tested via PBT. The same matched samples from the original-year mode comparability studies were used in this study. The results revealed small differences between CBT and PBT group across the shortened tests based on Session 1 only, similar to the results across the original tests including both Sessions 1 and 2. For both the original test and the shortened test, mode effects slightly favor PBT groups. The observed differences of the scale scores from the new RSSS tables based on Session 1 were applied as the adjustments to CBT students to ensure that students received comparable test scores regardless of the test mode.

## Appendix E: Memo on Operational Test Mode Comparability

THESTATEEDUCATION DEPARTMENT/THEUNNERSTTY OF THESTATE OF NEWYORK/ALBANY,NY 12234
Assistant Commissioner
Office of State Assessment

| SUBJECT: | Comparability of Spring 2021 Grades 3-8 English Language Arts and <br> Mathematics Paper-based and Computer-based Tests |

This memorandum provides information regarding the comparability of the Spring 2021 Grades 3-8 English Language Arts (ELA) and Mathematics paper-based and computer-based tests.

## Background

Being mindful of the variability in the manner that instruction was being provided to students across the State in response to COVID-19, for the Spring 2021 Grades 3-8 English Language Arts and Mathematics Tests, schools were only required to administer Session 1 of the ELA and Mathematics Tests to students, and Session 1 tests were reduced in length by the removal of the embedded multiple-choice field test questions. NYSED also administered pre-existing test forms from one of the last two administrations (either 2018 or 2019) for the 2021 administration of Grades 3-8 ELA and Mathematics Tests.

The Department offered the assessments in two administration modes: paper-based testing (PBT) and computer-based testing (CBT). Administering these tests via CBT was optional for schools and those schools that chose to offer CBT made this decision independently for each subject and grade. As in previous years, the Department provided readiness verification tools to help those schools selecting CBT ensure they were well equipped and prepared to provide a successful CBT experience for their students. Additionally, several CBT practice test sessions were made available to CBT schools to familiarize students and teachers with the CBT delivery system. Each of the CBT practice test sessions featured examples of the types of test questions included on the tests. This provided the opportunity for students to practice answering ELA and mathematics test questions on the computer devices they would be using for the actual test.

To further ensure fairness, the Department's contractor, Questar Assessment Inc., addressed issues of comparability on the shortened 2021 tests (Session 1 only), to identify whether or not there were any differences in student performance that could be attributed to the mode of test administration (i.e., PBT versus CBT).

The methodology to address issues of comparability and results for the Spring 2021 Grades 3-8 ELA and Mathematics Tests are summarized below.

## Comparability Methodology

In response to COVID-19, NYSED provided schools much more flexibility than had been necessary in past years in the local in-school scheduling and administration of the Spring 2021 ELA and Mathematics Tests. Given these unique circumstances, schools were not expected to bring students into the building to participate in the tests if the students were receiving entirely remote instruction during the testing windows. As a result, the population of students testing in 2021 was not representative of the student population overall. Therefore, issues of comparability were best addressed by the Department's contractor, Questar Assessment Inc., using data associated with the initial administration year for the assessments given (i.e., 2018 or 2019).

For the 2018 and 2019 administrations, a method called propensity score matching was employed to compare those students who tested via PBT with those who tested via CBT. Propensity score matching allowed for the identification of groups of students who tested via PBT that were similar to the groups of students who tested via CBT on a number of school and student characteristics, including achievement on the prior year's test. (Please see the "Comparability of Spring 2018 Grades 3-8 English Language Arts and Mathematics Paperbased and Computer-based Tests" or the "Comparability of Spring 2019 Grades 3-8 English Language Arts and Mathematics Paper-based and Computer-based Tests" for more information.)

Questar used these previously matched groups of PBT and CBT students to make a direct comparison of student results between the two groups for Session 1 only. For comparison, only the mean scale scores from Session 1 were calculated for each grade and subject by mode of testing. The results are shown in the section below,

## Results

Table 1 shows the Session 1 scale score means for the PBT and CBT groups from either the 2018 or 2019 English Language Arts Tests by grade (depending on the form administered), as well as the differences in mean scale scores between the matched groups. Table 2 shows these same data for the Mathematics Tests.

For those tests in which a difference in mean scale scores between the two comparable groups was observed for Session 1, the scale scores for all students who took the test in that grade via CBT for the Spring 2021 administration were adjusted by adding the number of scale score points shown in the "Difference" columns of Tables 1 and 2 to the CBT students' scale scores, up to the maximum attainable scale score. Table 3 presents a summary of the adjustments applied for the Spring 2021 administration of the Grades 3-8 ELA and Mathematics Tests.

These slight adjustments ensured that students who demonstrated comparable proficiencies in their knowledge and skills received comparable scores whether they tested on paper or on computer in 2021.

For questions concerning the Grades 3-8 ELA or Mathematics Tests, please email the Office of State Assessment or call 518-474-5902. For questions concerning CBT, please email CBT Support.

|  | PBT Scale Score Mean | CBT Scale Score Mean | Difference <br> (Rounded to nearest whole number) |
| :---: | :---: | :---: | :---: |
| Grade 3 | See footnote* |  | n/a |
| Grade 4 | 604.2 | 602.60 | +2 |
| Grade 5 | 601.6 | 599.3 | +2 |
| Grade 6 | 603.8 | 602.4 | +1 |
| Grade 7 | 602.5 | 601.0 | +2 |
| Grade 8 | 601.5 | 599.8 | +2 |

* Because Grade 3 students have no prior test results on which to match PBT to CBT students, a PBT comparison group was not created and group means were not calculated for this grade level

Table 2. PBT and CBT Means and Differences for Grades 3-8 Mathematics, Session 1 only

|  | PBT Scale Score Mean | CBT Scale Score Mean | Difference <br> (Rounded to nearest <br> whole number) |
| :--- | :---: | :---: | :---: |
| Grade 3 | See footnote* |  | $\mathrm{n} / \mathrm{a}$ |$|$| * |
| :--- |

*Because Grade 3 students have no prior test results on which to match PBT to CBT students, a PBT comparison group was not created and group means were not caloulated for this grade level

Table 3. Summary of Scale Score Adjustments for CBT

|  | ELA Scale Score Adjustment | Math Scale Score Adjustment |
| :--- | :---: | :---: |
| Grade 3 | $+2^{*}$ | $+1^{*}$ |
| Grade 4 | +2 | +1 |
| Grade 5 | +2 | +1 |
| Grade 6 | +1 | +1 |
| Grade 7 | +2 | +2 |
| Grade 8 | +2 | +1 |

* Because Grade 3 students have no prior test results on which to match PBT to CBT students, a PBT comparison group was not created and group means were not calculated for this grade level. Instead, the mean adjustment for the other elementary grades for which a comparison was possible (i.e. Grades 4 \& 5) was applied to the scores of Grade 3 students who tested via CBT.

[^0]:    ${ }^{1}$ * Based on Session 1 test questions from the original administration test data.

[^1]:    *Note. Based on Session 1 test questions from the original administration test data.

[^2]:    * A CBT mode adjustment has been taken into account for these scale scores
