How is MGP Classified into 3012-d Growth Rating for Schools with Grades 4-8 in 2022-23?

A school's State-provided growth rating (the HEDI rating) and growth score (0-20) is based on the "mean growth percentile" or MGP, the aggregate measure of student growth in the school. An MGP is calculated by finding the average of all the SGPs for students attributed to a school across grades and subjects. That MGP is then reported with an upper limit and a lower limit representing a 95-percent confidence range (because all statistical calculations contain some uncertainty). We use the overall adjusted MGP (the MGP that combines information across all applicable grade levels and subjects) and upper- and lower-limit MGPs to determine growth ratings, as shown in **Figures 1 and 2**.

A growth score of 0-20 points is then assigned within each growth rating category (HEDI) using the scoring bands prescribed in Subpart 30-3 of the Rules of the Board of Regents.

Point value of 13 includes principals with MGPs in the ineffective category but confidence ranges that extend higher than 0.75 standard deviations below the state average

Point value of 15 includes schools with MGPs in the Developing category but confidence ranges above state average

Point value of 17 includes schools with MGPs in the Highly Effective category but confidence ranges below state average

Note: Values are rounded to the nearest 0.5
